Control Allocation for Spacecraft Under Actuator Faults Qinglei Hu,Bo Li,Bing Xiao,Youmin Zhang,2021-03-13 This book provides a systematical and comprehensive description of some facets of modeling designing analyzing and exploring the control allocation and fault tolerant control problems for over actuated spacecraft attitude control system under actuator failures system uncertainties and disturbances The book intends to provide a unified platform for understanding and applicability of the fault tolerant attitude control and control allocation for different purposes in aerospace engineering and some related fields And it is particularly suited for readers who are interested to learn solutions in spacecraft attitude control system design and related engineering applications

Maximum Principle and Dynamic Programming Viscosity Solution Approach Bing Sun,Bao-Zhu Guo,Zhen-Zhen Tao,2025-08-02 This book is concerned with optimal control problems of dynamical systems described by partial differential equations PDEs The content covers the theory and numerical algorithms starting with open loop control and ending with closed loop control It includes Pontryagin s maximum principle and the Bellman dynamic programming principle based on the notion of viscosity solution The Bellman dynamic programming method can produce the optimal control in feedback form making it more appealing for online implementations and robustness The determination of the optimal feedback control law is of fundamental importance in optimal control and can be argued as the Holy Grail of control theory The book is organized into five chapters Chapter 1 presents necessary mathematical knowledge Chapters 2 and 3 Part 1 focus on the open loop control while Chapter 4 and 5 Part 2 focus on the closed loop control In this monograph we incorporate the notion of viscosity solution of PDE with dynamic programming approach The dynamic programming viscosity solution DPVS approach is then used to investigate optimal control problems In each problem the optimal feedback law is synthesized and numerically demonstrated The last chapter presents multiple algorithms for the DPVS approach including an upwind finite difference scheme with the convergence proof It is worth noting that the dynamic systems considered are primarily of technical or biologic origin which is a highlight of the book This book is systematic and self contained It can serve the expert as a ready reference for control theory of infinite dimensional systems These chapters taken together would also make a one semester course for graduate with first courses in PDE constrained optimal control

Fault-Tolerant Attitude Control of Spacecraft Qinglei Hu,Bing Xiao,Bo Li,Youmin Zhang,2021-06-09 Fault Tolerant Attitude Control of Spacecraft presents the fundamentals of spacecraft fault tolerant attitude control systems along with the most recent research and advanced nonlinear control techniques This book gives researchers a self contained guide to the complex tasks of envisaging designing implementing and experimenting by presenting designs for integrated modeling dynamics fault tolerant attitude control and fault reconstruction for spacecraft Specifically the book gives a full literature review and presents preliminaries and mathematical models robust fault tolerant attitude control fault tolerant attitude control with actuator saturation velocity free fault tolerant attitude control finite time
