Research Paper FPL ,1983 *Constitutive Modelling of High Strength/high Performance Concrete* fib Fédération internationale du béton,2008-01-01 High Strength High Performance Concrete HSC HPC continues to be the object of particular interest and extensive research and its use in construction is increasing continuously fib Bulletin 42 summarises the available information on the material behaviour of HSC HPC and develops a set of code type constitutive relations as an extension of CEB FIP Model Code 1990 Literature on experimental data and international guidelines standards and recommendations were reviewed and already existing constitutive relations and models were evaluated In addition to a number of material laws chosen and adjusted for this report some new constitutive relations were developed based on the collected data The criteria for the choice of the existing relations as well as the development of the new constitutive relations involved their simplicity and operability code type mathematical formulations Furthermore they had to be physically sound and if possible describe the behaviour of both high performance and normal strength concretes by a unique relation Finally compliance with the specifications given in the CEB FIP Model Code 1990 was examined This State of art report is intended for engineers and represents a summary of the relevant knowledge available to and possessed by the members of the Task Group at the time of its drafting **Design of Buildings for Fire Safety** E. **Protection and Repair of Concrete Structures** FIB – International Federation for Structural Concrete,2022-03-01 The idea of preparing a technical document for the repairs and interventions upon concrete structures goes back to the former fib COM5 Structural Service Life Aspects being the goal of the then TG5 9 After a long period of reduced activity and taking into account the reorganization of fib commissions that meanwhile took place on June 2017 a different approach was proposed to push forward the task of TG8 1 formerly TG5 9 The new goal of TG 8 1 was to deliver a how to do guide gathering together

protection repair and strengthening techniques for concrete structures Chapters are intended to provide both guidelines and case studies serving as support to the application of fib MC2020 pre normative specifications Each chapter was written by an editorial team comprising desirably at least a researcher a designer and a contractor Templates have been prepared in order to harmonize the contents and the presentation of the different methods Following the writing process chapters were reviewed by experts and after amendments by the authors they underwent a second review process by COM8 and TG3 4 members as well as by different practitioners For each protection repair and strengthening method addressed in this guide readers have a description of when to adopt it which materials and systems are required which techniques are available and what kind of equipment is needed It then presents a summary of stakeholders roles and qualifications design guidelines referring to most relevant codes and references the intervention procedure quality control measures and monitoring and maintenance activities Due to the extent of the guide it was decided to publish it as bulletin 102 addressing protection and repair methods and bulletin 103 addressing strengthening methods We would like to thank the authors reviewers and members of COM8 and TG3 4 for their work in developing this fib Bulletin which we hope will be useful for professionals working in the field of existing concrete structures especially those concerned with life cycle management and conservation activities As noted above this Bulletin is also intended to act as a background and supporting document to the next edition of the fib Model Code for Concrete Structures which is currently under development under the auspices of TG10 1 with the working title of fib Model Code 2020

**Precast Concrete Railway Track Systems** fib Fédération internationale du béton, 2006-01-01 In 1986 the FIP Commission on Prefabrication issued the state of art report Concrete Railway Sleepers which included design considerations manufacturing methods rail fastening systems and field performance During the two decades since that report precast concrete has gained importance in the field of railway track systems for plain track switches and crossings tunnels and other applications Developments in production methods for concrete sleepers in switch and crossing layouts to cope with the complex geometry and the industry's confidence in their performance have contributed to the huge increase in the use of this type of sleeper The use of slab track for high speed track has also grown particularly where either new track is built or where existing track is renewed and long periods of track possession are possible There has also been progress in the development of plant and equipment for the installation renewal and maintenance of concrete sleepers track With machines now able to replace existing track at a rate of 5000 sleepers over 3 km track per day choosing concrete sleepers can reduce the time on site meaning tracks can be reopened quickly whilst reducing labour requirements and costs Today precast concrete is considered to be the best performing and preferred material for railway sleepers due to the following factors long term durability improved geometric retention of track and greater weight vital for high speed and heavy freight lines improved elasticity of track improved ride quality low first cost minimum life cycle cost low cost of maintenance environmental friendliness no chemical treatment required and can be recycled As all aspects of precast

concrete railway track systems from design through manufacture to installation and maintenance have progressed since the publication of the FIP report an update was considered timely in order to provide a synthesis of currently available information This new edition covers quality design production durability maintenance and environmental considerations and includes survey on the use of precast concrete track systems in over 30 countries International Handbook of Structural Fire Engineering Kevin LaMalva,Danny Hopkin,2021-10-12 This Handbook is focused on structural resilience in the event of fire It serves as a single point of reference for practicing structural and fire protection engineers on the topic of structural fire safety It is also stands as a key point of reference for university students engaged with structural fire engineering
