power were required for a proper conception and supervision of the operations Threlfall 1940 Only small area of a few hundred square kilometres can be accurately mapped and surveyed without a frame work since no difficulty is encountered because of Earth curvature In the past especially in hydrography due to the type of work surveying was carried out on the principles of ordinary practice but in a very rough manner rapidity of execution being of paramount importance the permissible error was sometimes large The relative positions of the main surface features were obtained by aid of portable instruments such as sextants and lead lines tide poles and logships Sketching just like military surveying was often filling in the smaller detail In contrary survey works done by the national mapping agencies NMAs were of a higher level and comprised the delimitation of boundaries as well as topographical surveys *Scientific and Technical Aerospace Reports*, 1992 Mathematical Reviews, 2004 **Who's who in America**, 1995 *Fortran 77 and Numerical Methods for Engineers* Garold J.
