APPLIED PETROLEUM RESERVOIR ENGINEERING

THIRD EDITION

The background of the cover features a detailed illustration of an offshore oil drilling rig. The rig is a complex structure of steel beams and platforms, extending vertically from a rocky, uneven seabed. The seabed is depicted with various shades of blue, grey, and white, suggesting different rock formations and possibly some water. The rig itself is dark, with some highlights indicating its metallic structure. The overall scene is set against a dark, textured background that blends with the rig's structure.

Reservoir Engineering Techniques Using Fortran Mihir K. Sinha, Larry R. Padgett, 2012-12-06 Practical reservoir engineering techniques have been adequately described in various publications and textbooks and virtually all useful techniques are suit able for implementation on a digital computer Computer programs have been written for many of these techniques but the source programs are usually not available in published form The purpose of this book is to provide a central source of FORTRAN coded algorithms for a wide range of conventional reservoir engineering techniques The book may be used as a supplementary text for courses in practical reservoir engineering However the book is primarily intended for practicing reservoir engineers in the hope that the collection of programs provided will greatly facilitate their work In addition the book should be also helpful for non petroleum engineers who are involved in applying the results of reservoir engineering analysis Sufficient information is provided about each of the techniques to allow the book to be used as a handy reference ix INTRODUCTION This book provides many of the useful practical reservoir engineering conventional techniques used today in the form of FORTRAN codes The primary objectives have been to provide the simplest possible method for obtaining reliable answers to practical problems Unfortunately these codes can usually be applied by simply following a cookbook approach However if at all possible the solutions obtained should be verified and cross checked by some other means and most important should be checked for reasonability

Geomechanics, Fluid Dynamics and Well Testing, Applied to Naturally Fractured Carbonate Reservoirs Nelson Enrique Barros Galvis, 2018-05-02 This thesis presents an important step towards a deeper understanding of naturally fractured carbonate reservoirs NFCRs It demonstrates the various kinds of discontinuities using geological evidence mathematical kinematics model and computed tomography and uses this as a basis for proposing a new classification for NFCRs Additionally this study takes advantage of rock mechanics theory to illustrate how natural fractures can collapse due to fluid flow and pressure changes in the fractured media The explanations and mathematical modeling developed in this dissertation can be used as diagnostic tools to predict fluid velocity fluid flow tectonic fracture collapse pressure behavior during reservoir depleting considering stress sensitive and non stress sensitive with nonlinear terms in the diffusivity equation applied to NFCRs Furthermore the book presents the description of real reservoirs with their field data as the principal goal in the mathematical description of the realistic phenomenology of NFCRs

Mathematical Theory of Oil and Gas Recovery P. Bedrikovetsky, 2013-04-17 It is a pleasure to be asked to write the foreword to this interesting new book When Professor Bedrikovetsky first accepted my invitation to spend an extended sabbatical period in the Department of Mineral Resources Engineering at Imperial College of Science Technology and Medicine I hoped it would be a period of fruitful collaboration This book a short course and a variety of technical papers are tangible evidence of a successful stay in the UK I am also pleased that Professor Bedrikovetsky acted on my suggestion to publish this book with Kluwer as part of the petroleum publications for which I am Series Editor The book derives much of its origin from the unpublished Doctor of Science thesis which Professor Bedrikovetsky prepared in Russian while at the Gubkin Institute The original DSc contained a number of discrete publications unified by an analytical mathematics approach to fluid flow in petroleum reservoirs During his sabbatical stay at Imperial College Professor Bedrikovetsky has refined and extended many of the chapters and has discussed each one with internationally recognised

experts in the field He received great encouragement and editorial advice from Dr Gren Rowan who pioneered analytical methods in reservoir modelling at BP for many years
