

Why Glyphosate should be Banned

“**Monsanto** has been **lying** and **covering up the truth** about glyphosate’s harmful effects on public health and the environment for decades. The increases in multiple chronic diseases, seen since its introduction into the food supply, continue to rise in step with its use. Monsanto’s Roundup glyphosate based herbicides have a ubiquitous presence as residues in the food supply directly associated with its crop use. **Nations must stand together against Monsanto** and other chemical companies who **continue to destroy the biosphere**. **We are all part of that biosphere and we are all connected. What affects one affects us all.**”

The Subjugation of Canadian Wildlife Max Foran, 2018-04-10 Hardly a day goes by without news of the extinction or endangerment of yet another animal species followed by urgent but largely unheeded calls for action An eloquent denunciation of the failures of Canada's government and society to protect wildlife from human exploitation Max Foran's *The Subjugation of Canadian Wildlife* argues that a root cause of wildlife depletions and habitat loss is the culturally ingrained beliefs that underpin management practices and policies Tracing the evolution of the highly contestable assumptions that define the human wildlife relationship Foran stresses the price wild animals pay for human self interest Using several examples of government oversight at the federal provincial and territorial levels from the Species at Risk Act to the Biodiversity Strategy Protected Areas Network and provincial management plans this volume shows that wildlife policies are as much or more about human needs priorities and profit as they are about preservation Challenging established concepts including ecological integrity adaptive management sport hunting as conservation and the flawed belief that wildlife is a renewable resource the author compels us to recognize animals as sentient individuals and as integral components of complex ecological systems A passionate critique of contemporary wildlife policy *The Subjugation of Canadian Wildlife* calls for belief change as the best hope for an ecologically healthy wildlife rich Canada

Frank Fischer, Clark A. Chinn, Katharina Engelmann, Jonathan Osborne, 2018-06-13 Competence in scientific reasoning is one of the most valued outcomes of secondary and higher education However there is a need for a deeper understanding of and further research into the roles of domain general and domain specific knowledge in such reasoning This book explores the functions and limitations of domain general conceptions of reasoning and argumentation the substantial differences that exist between the disciplines and the role of domain specific knowledge and epistemologies Featuring chapters and commentaries by widely cited experts in the learning sciences educational psychology science education history education and cognitive science Scientific Reasoning and Argumentation presents new perspectives on a decades long debate about the role of domain specific knowledge and its contribution to the development of more general reasoning abilities **Residues** Soraya Boudia, Angela N. Eiser, 2021-10-11 Learn how to reduce the impact of environmental toxins on brain development functioning and health The human brain is a marvelously complex organ that has evolved great new capabilities over the past 250 000 years During most of that period daily life was vastly different from our lives today Exercise was not optional one literally had to run for one's life livelihood and sustenance The Stone Age diet was not a fad but the only food available Periods of fasting arose from food

scarcity and hence the earliest keto diet was commonplace Life changed greatly with the advent of agriculture and industry Diseases that were previously unknown or uncommon began to surface as by products of civilization s advance Changes in our ways of living have altered the nature of illness as well as its diagnosis and treatment From the 1970s to the present tens of thousands of chemicals with applications in all aspects of our lives have grown more than 40 fold Exposure to these new substances has impacted many aspects of our health especially the delicate parts of the brain and nervous system In parallel with the changes in our environment we have seen the growth of brain disorders including Alzheimer s Disease and autism in previously unimaginable ways Here Arnold Eiser elucidates some features of diseases affecting the nervous system that are increasing in incidence with a focus on those disorders that appear related to environmental toxins that modern life has introduced He takes readers behind the scenes of the science itself to discover the human stories involved in the discovery and management of these illnesses Offering insights from a variety of scientific disciplines Eiser clearly and succinctly illustrates the impact of toxins on our brains and how we might better protect ourselves from negative outcomes With interviews from leading authorities in the field of neuroscience environmental toxicology integrative medicine neurology immunology geriatrics and microbiology re the gut microbiome this book offers a robust understanding of the complex threats to our brains and the healthy brain s dependence upon many other systems within our bodies This is a voyage of discovery into the science history and human struggle regarding disorders challenging the brain as well as their possible prevention

The Glyphosate Files Helmut Burtscher-Schaden,2017-10-26 Glyphosate is everywhere The world s most widely sold pesticide is present in farmland fields and rivers We eat it in bread drink it in beer and carry it in our bodies No problem say the authorities responsible for its approval and the manufacturers the weed killer has been thoroughly examined and is safe Not true says the WHO s own cancer research agency which classified the pesticide as a probable human carcinogen in 2015 But if the WHO cancer researchers found sufficient evidence of a carcinogenic effect how could the licensing authorities fail for decades to find any signs in the same animal studies The search for answers leads the author of this investigative and enthralling book into official U S archives from the 1970s and 80s and on to the documents being used in the current European approvals process The details of the secret studies by Monsanto Co which this research brings to light provide unsettling insights into the entanglements between industry private testing institutions and the regulatory authorities They expose a system which allows the chemical manufacturers to downplay the risks of their products In the end the question remains do our governments offer greater protection to commercial interests or to our health

Whistleblower-Enthüllungen □ **Whistleblower-Preis 2015** Dieter Deiseroth,,Hartmut Graßl,2016-06-03 **Die Akte Glyphosat** Helmut Burtscher-Schaden,2017-09-01 Glyphosat ist berall in ckern auf Feldern und in Fl ssen Wir essen es im Brot trinken es im Bier und tragen es im K rper Macht aber nichts beruhigen die Zulassungsbeh rden und Hersteller Der Unkrautvernichter sei bestens untersucht und sicher Stimmt nicht widerspricht die WHO und stufte Glyphosat 2015 als

wahrscheinlich krebserregend für den Menschen ein. Doch wie konnten die Zulassungsbehörden jahrzehntelang auf Basis derselben Tierstudien keine Hinweise auf eine krebserregende Wirkung erkennen, die laut den Krebsforschern der WHO ausreichende Beweise liefern? Auf der Suche nach Antworten begibt sich Helmut Burtcher auf eine Reise durch die US-amerikanischen Behörden Archive der 1970er und 80er Jahre und analysiert die verfügbaren Dokumente aus dem gegenwärtigen europäischen Zulassungsverfahren. Die Details, die er rund um die geheimen Studien der Hersteller ans Licht bringt, eröffnen erschreckende Einblicke in die Verstrickungen zwischen Industrie, privaten Prüfinstituten und Kontrollbehörden. Sie entlarven ein System, das die Hersteller dabei unterstützt, Gefahren und Risiken ihrer Produkte herunterzuspielen. Letztendlich bleibt die Frage: Wem lassen unsere Regierungen mehr Schutz angedeihen: Konzerninteressen oder unserer Gesundheit?

Chemical Warfare on America George Orville, 2018-03-05. I received my bachelor of science degree in analytical chemistry from Wayne State University in Detroit, Michigan. My first full-time employment after graduation was with the Federal Food and Drug Administration. The duties consisted of analyzing food and drugs that were being sold in the United States. It also included analyzing food products imported from foreign nations for any pest contamination. The food products from large food-producing manufacturers were also analyzed for pest contamination and content. The drugs were analyzed for amount specified on labels. There were numerous FDA laboratory districts established nationwide. The Detroit district employed about forty analytical chemists and about forty to fifty inspectors. Our district director emphasized on us the importance of our work. Two of the important items mentioned at our occasional gathering emphasized the importance of FDA work. One was the advent of sulfa drugs prior to antibiotics that were widely used and they were highly not soluble. Someone at one of the manufacturing outfits figured out a way of dissolving the sulfa drugs in ethylene glycol car cooling system liquid, highly poisonous. This elixir was used on a ten-year-old boy who died due to the poison. The other item he mentioned was an inspector at a tuna canning manufacturer observed how some decomposed sections of the fish were slowly incorporated into the final canned product. It is a shame that these highly guarded human health districts have been closed. This is why this book came about.

Ebook: Environmental Science: A Global Concern William Cunningham, Mary Cunningham, 2014-10-16. Environmental Science: A Global Concern is a comprehensive presentation of environmental science for non-science majors which emphasizes critical thinking, environmental responsibility, and global awareness. This book is intended for use in a one- or two-semester course in environmental science, human ecology, or environmental studies at the college or advanced placement high school level. As practicing scientists and educators, the Cunningham author team brings decades of experience in the classroom, in the practice of science, and in civic engagement. This experience helps give students a clear sense of what environmental science is and why it matters. In this exciting new 13th edition, Environmental Science: A Global Concern provides readers with an up-to-date introductory global view of essential themes in environmental science. The authors balance evidence of serious

Curing Cancerphobia

David Ropeik, 2023-11-28 Our fear of cancer causes great harm to individual health and to society The fear of cancer is understandable But that fear is in some ways outdated as it fails to account for the medical progress made against this family of diseases In *Curing Cancerphobia* David Ropeik reveals the fascinating historical and psychological roots of our fear of cancer and documents the dramatic health and financial harms caused when that fear exceeds the risk Fear of cancer drives millions for whom screening is not recommended to screen for the disease anyway producing tens of thousands of emotionally damaging false positives and costing the US health care system an estimated 9.2 billion a year At the same time fear of cancer also causes many people for whom screening is recommended to avoid it altogether Modern screening technologies often identify cancers that do not spread or that grow so slowly they almost certainly will never cause harm in a person's lifetime Yet many of these people frightened by the word cancer in their diagnosis understandably choose more aggressive and risky treatments than their clinical conditions require These unnecessary treatments kill hundreds of people cause severe side effects in thousands and cost the health care system at least 5.2 billion a year Additionally consumers spend billions of dollars on vitamins and supplements organic food and other products that promise to reduce our risk of cancer but do not actually reduce it And an excessive fear of cancer causes resistance to potentially beneficial technologies like nuclear power and fluoridation of tap water After documenting these harms Ropeik offers tools and suggestions to help reduce the negative impacts of cancerphobia Based on extensive research including interviews with experts and cancer patients *Curing Cancerphobia* confronts our emotional relationship with the disease we fear more than any other

Trajectories in Environmental Politics Graeme Hayes, Sikina Jinnah, Prakash Kashwan, David M. Konisky, Sherilyn Macgregor, John M. Meyer, Anthony R. Zito, 2022-03-30 This book explores the dominant framings and paradigms of environmental politics the relationship between academic analysis and environmental politics and reflects on the first thirty years of the journal *Environmental Politics* The book has two purposes The first is to identify and discuss the key themes that have driven scholarship in the field of environmental politics over the last three decades and to highlight how this has also led to oversights and silences and the marginalisation of important forms of analysis and thought As several chapters in the book explore problem solving frameworks have increasingly taken away space from more radical systemic challenge and critique as the key themes of environmental politics have become ever more central to the field of politics as a whole and as our understandings of social and environmental crisis become ever clearer and more urgent The second purpose of the volume is to map out a series of new and developing agendas for environmental politics The chapters in this volume focus foremost on questions of justice materiality and power Discussing state violence multispecies justice epistemic injustice the circular economy NGOs parties green transition and urban climate governance they call above all for greater attention to intersectionality and interdisciplinarity and for centering key insights about power relations and socio economic inequalities into increasingly widespread yet also often depoliticised topics in the study of environmental politics The chapters in this

book were originally published as a special issue of Environmental Politics
