[A Million Little Miracles](#) Mark Batterson,2024-11-19 The New York Times bestselling author of Win the Day reminds us of the millions of miracles God performs every day and inspires us to live with a clearer sense of identity and purpose Think you ve never experienced a miracle With all due respect you have never not In fact you are one There never has been and there never will be anyone else like you That isn t a testament to you It s a testament to the God who created you Your fingerprint eyeprint and voiceprint are unlike anyone else s Simply put you matter to God Most of us take everyday miracles for granted including the one that stares back at us in the mirror It s time to take them for gratitude Why is that so important Because whatever you don t turn into praise turns into pride The miracle of life becomes mundane We get so wrapped up in our own little world we end up worshipping a god who looks like us acts like us and thinks like us It s no wonder we ve lost our wonder But there is a way to recapture holy curiosity In A Million Little Miracles New York Times bestselling author Mark Batterson reveals three miraculous truths that awaken us to carpe wonder for the Creator and His creation 1 God Is Bigger Than We Think we can rest in His wisdom and strength 2 God Is Closer Than We Realize we never have to do life alone 3 God Is Better Than We Imagine we can reclaim our childlike wonder A million little miracles are waiting to be discovered including the miracle called you

[The Martians](#) David Baron,2025-08-26 Long before NASA began contemplating a visit to our neighboring world a turn of the century Mars craze invaded the public s imagination here thrillingly retold in David Baron s The Martians There Is Life on the Planet Mars New York Times December 9 1906 This New York Times headline was no joke In the early 1900s many Americans actually believed we had discovered intelligent life on Mars as best selling science writer David Baron chronicles in The Martians his truly bizarre tale of a nation swept up in Mars mania At the center of Baron s historical drama is Percival Lowell the Boston Brahmin and Harvard scion

who observed canals etched into the surface of Mars Lowell devised a grand theory that the red planet was home to a utopian society that had built gargantuan ditches to funnel precious meltwater from the polar icecaps to desert farms and oasis cities The public fell in love with the ambitious amateur astronomer who shared his findings in speeches and wildly popular books While at first people treated the Martians whimsically Martians headlining Broadway shows biologists speculating whether they were winged or gilled the discussion quickly became serious Inventor Nikola Tesla announced he had received radio signals from Mars Alexander Graham Bell agreed there was no escape from the conviction that intelligent beings inhabited the planet Martian excitement reached its zenith when Lowell financed an expedition to photograph Mars from Chile's Atacama Desert resulting in what newspapers hailed as proof of the Martian canals existence Triumph quickly yielded to tragedy Those wild claims and highly speculative photographs emboldened Lowell's critics whose withering attacks gathered steam and eventually wrecked the man and his theory but not the fervor he had started Although Lowell would die discredited and delusional in 1916 the Mars frenzy spurred a nascent literary genre called science fiction and the world's sense of its place in the universe would never be the same Today the red planet maintains its grip on the public's imagination Many see Mars as civilization's destiny the first step toward our becoming an interplanetary species but as David Baron demonstrates this tendency to project our hopes onto the world next door is hardly new The Martians is a scintillating and necessary reminder that while we look to Mars for answers what we often find are mirrors of ourselves

Transcending the Speed of Light Marc Seifer, 2008-08-13 A study of the new scientific understanding of consciousness and the mind as a fifth dimension of reality Introduces the existence of a fifth dimension one of mind an inner or hyperspace where time is transcended Shows how the barrier of the speed of light is actually a gateway demarking the fifth dimension Since the introduction of Descartes dualism in the seventeenth century the mind and the physical world have been viewed as disconnected entities Yet qualities of mind such as awareness purposeful action organization design and even decision making are present within the structure of matter and within the dimensions of space and time The space time continuum of scientists generally ignores the realm of the mind though phenomena such as imaginary numbers used by Einstein to combine space with time are concepts that only exist in the mind Marc Seifer contends that the inadequacy of four dimensional models to account for our experience of mental phenomena points to the consciousness of the mind as a higher organizing principle a fifth dimension where thoughts are as real and quantifiable as our familiar physical world He shows that because thought enables us to move backward and forward through time reflecting on the past and making plans for the future this fifth dimension of mind breaks the laws of relativity thereby transcending the speed of light His extensive study of this fifth dimension ranges from relativity and ether theory to precognition telepathy and synchronicity all from the perspective of the conscious universe **Brilliant** Jane Brox, 2010-06-29 This superb history of artificial light traces the evolution of society invariably fascinating and often original it amply lives up to its title Publishers Weekly starred review In

Brilliant Jane Brox explores humankind's ever changing relationship to artificial light from the stone lamps of the Pleistocene to the LEDs embedded in fabrics of the future More than a survey of technological development this sweeping history reveals how artificial light changed our world and how those social and cultural changes in turn led to the pursuit of more ways of spreading maintaining and controlling light Brox plumbs the class implications of light who had it who didn't through the centuries when crude lamps and tallow candles constricted waking hours She identifies the pursuit of whale oil as the first time the need for light thrust us toward an environmental tipping point Only decades later gas street lights opened up the evening hours to leisure which changed the ways we live and sleep and the world's ecosystems Edison's bulbs produced a light that seemed to its users all but divorced from human effort or cost And yet as Brox's informative portrait of our current grid system shows the cost is ever with us Brilliant is infused with human voices startling insights and timely questions about how our future lives will be shaped by light
