**The Dirichlet Space and Related Function Spaces** Nicola Arcozzi, Richard Rochberg, Eric T. Sawyer, Brett D. Wick, 2019-09-03 The study of the classical Dirichlet space is one of the central topics on the intersection of the theory of holomorphic functions and functional analysis It was introduced about 100 years ago and continues to be an area of active current research The theory is related to such important themes as multipliers reproducing kernels and Besov spaces among others The authors present the theory of the Dirichlet space and related spaces starting with classical results and including some quite recent achievements like Dirichlet type spaces of functions in several complex variables and the corona problem The first part of this book is an introduction to the function theory and operator theory of the classical Dirichlet space a space of holomorphic functions on the unit disk defined by a smoothness criterion The Dirichlet space is also a Hilbert space with a reproducing kernel and is the model for the dyadic Dirichlet space a sequence space defined on the dyadic tree These various viewpoints are used to study a range of topics including the Pick property multipliers Carleson measures boundary values zero sets interpolating sequences the local Dirichlet integral shift invariant subspaces and Hankel forms Recurring themes include analogies sometimes weak and sometimes strong with the classical Hardy space and the analogy with the dyadic Dirichlet space The final chapters of the book focus on Besov spaces of holomorphic functions on the complex unit ball a class of Banach spaces generalizing the Dirichlet space Additional techniques are developed to work with the nonisotropic complex geometry including a useful invariant definition of local oscillation and a sophisticated variation on the dyadic Dirichlet space Descriptions are obtained of multipliers Carleson measures interpolating sequences and multiplier interpolating sequences estimates are obtained to prove corona theorems The Asymptotic Theory of Solutions of  $\Delta u + k^2 u = 0$  Willard L. Miranker, 1957 The subject of this report is the asymptotic theory of solutions  $u$  of the reduced wave equation  $\Delta u + k^2 u = 0$  defined in infinite domains In Section 1 we furnish new proofs of three well known theorems concerning  $u$  These are Rellich's growth estimate the uniqueness theorem for the exterior boundary value problem and the representation theorem A new result the representation theorem for  $u$  when the boundary of the domain of definition of  $u$  is infinite is also given In Section

2 Rellich's growth estimate is extended to solutions of the equation  $\Delta v = k^2 v$ . From this result we are able to deduce various uniqueness and representation theorems for solutions of this equation. In Section 3 we show that the normal boundary values of a radiating solution  $u$  of  $\Delta u = k^2 u$  is bounded by a homogeneous quadratic functional of its boundary values. This result combined with the representation theorem for  $u$  yields an  $L^2$  maximum principle for  $u$ . Finally in section 4 the behavior of  $u$  when the parameter  $k$  becomes large is considered. We explain the method of G. Birkhoff for obtaining formal asymptotic expansions for  $u$  and deduce several results concerning the existence and validity of these formal expansions.
