Weird Ideas That Work Robert I. Sutton, 2002-03-02 A breakthrough in management thinking weird ideas can help every organization achieve a balance between sustaining performance and fostering new ideas To succeed you need to be both conventional and counterintuitive Creativity new ideas innovation in any age they are keys to success Yet as Stanford professor Robert Sutton explains the standard rules of business behavior and management are precisely the opposite of what it takes to build an innovative company We are told to hire people who will fit in to train them extensively and to work to instill a corporate culture in every employee In fact in order to foster creativity we should hire misfits goad them to fight and pay them to defy convention and undermine the prevailing culture Weird Ideas That Work codifies these and other proven counterintuitive ideas to help you turn your workplace from staid and safe to wild and woolly and creative In Weird Ideas That Work Sutton draws on extensive research in behavioral psychology to explain how innovation can be fostered in hiring managing and motivating people building teams making decisions and interacting with outsiders Business practices like hire people who make you uncomfortable and reward success and failure but punish inaction strike many managers as strange or even downright wrong Yet Weird Ideas That Work shows how some of the best teams and companies use these and other counterintuitive practices to crank out new ideas and it demonstrates that every company can reap sales and profits from such creativity Weird Ideas That Work is filled with examples drawn from hi and low tech industries manufacturing and services information and products More than just a set of bizarre suggestions it represents a breakthrough in management thinking Sutton shows that the practices we need to sustain performance are in constant tension with those that foster new ideas The trick is to choose the right balance between conventional and weird and now thanks to Robert Sutton's work we have the tools we need to do so

**Nine Crazy Ideas in Science** Robert Ehrlich, 2018-06-05 AIDS is not caused by HIV Coal and oil are not fossil fuels Radiation exposure is good for you Distributing more guns reduces crime These ideas make headlines but most educated people scoff at them Yet some of science's most important concepts from gravity to evolution have surfaced from the pool of crazy ideas In fact a good part of science is distinguishing between useful crazy ideas and those that are just plain nutty In this book a well known physicist with an affinity for odd ideas applies his open mind to nine controversial propositions on topical subjects Some it turns out are considerably lower on the cuckoo scale than others Robert Ehrlich evaluates for the general reader or student nine seemingly far out propositions culled from physics biology and social science In the process he demonstrates in easy to understand terms how to weigh an argument judge someone's use of statistics identify underlying assumptions and ferret out secret agendas His conclusions are sometimes surprising For instance he finds that while HIV does cause AIDS and the universe almost certainly started with a big bang our solar system could have two suns faster than light particles might exist and time travel can't be ruled out as mere science fiction Anyone interested in unorthodox ideas will get a kick out of this book And as a fun way of learning how to think like a scientist it has enormous educational value Of course only time will tell whether any of these nine ideas will be the next continental drift the now orthodox account of the Earth's geology that was for years just a crazy idea

This witty book reveals the humbling vastness of our ignorance about the universe along with charming insights into what we actually do understand Carlo Rovelli author of Seven Brief Lessons on Physics and Reality Is Not What It Seems In our small corner of the universe we know how some matter behaves most of the time and what even less of it looks like and we have some good guesses about where it all came from But we really have no clue what's going on In fact we don't know what about 95% of the universe is made of So what happens when a cartoonist and a physicist walk into this strange mostly unknown universe Jorge Cham and Daniel Whiteson gleefully explore the biggest unknowns why these things are still mysteries and what a lot of smart people are doing to figure out the answers or at least ask the right questions While they're at it they helpfully demystify many complicated things we do know about from quarks and neutrinos to gravitational waves and exploding black holes With equal doses of humour and delight they invite us to see the universe as a vast expanse of mostly uncharted territory that's still ours to explore This is a book for fans of Brian Cox and What If This highly entertaining highly illustrated book is perfect for anyone who's curious about all the great mysteries physicists are going to solve next
