### Requirements

It is a process where the basic **functional** requirements:

- a) Requirements are analysed and brought forward
- b) Further non-functional requirements are generated the system function and specified in system design. Interrelated with the requirements engineering subdiscipline with architecture design

Architecture shows a general form of the system and where these three, system design does it with more details.

The functional requirements are things that are needed fulfilled and are following:

- a) Information modelling

The process of identifying, modelling and documenting the information that is needed to support a system. This results in a data model representing the data which will be used to support the system. Information modelling involves both data and the control, knowledge, and behaviour to support the system.

- b) Data flow modelling

The process of identifying, modelling and documenting how data moves around an information system. Data flow modelling involves processes, activities, data stores, data flows, and control structures. The modelling process for data control involves both data and the control, knowledge, and behaviour to support the system.

- c) State space modelling

It is a method for the study of the behaviour of a system. It involves identifying the states that affect the system and the sequence of events that can occur. State space modelling involves identifying the states that affect the system and the sequence of events that can occur.

Architecture also states requirements around security as system design can benefit in these and other things, making the system robust.

The functional requirements are specified in a requirements analysis, the requirements are design made a requirement with the following:

### Stage 1 – Identifying needs

As with the business analysis it is a good idea to identify those areas that need to be investigated in order to provide and implement the system.
