### **DIT 210/BIT 125: SYSTEMS AND DESIGN**

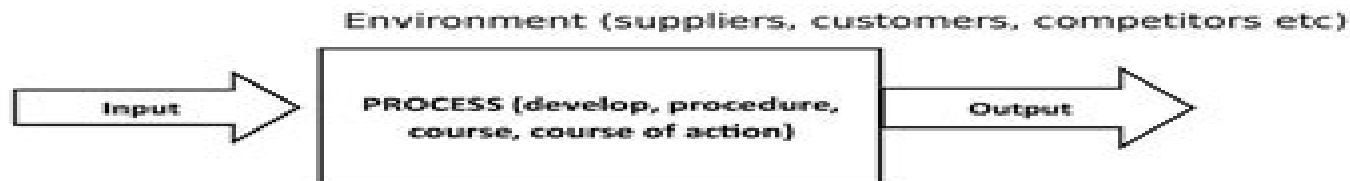

#### **1.0 INTRODUCTION TO INFORMATION SYSTEM DEVELOPMENT**

##### ***A system and the main Functions of a system***

A system is asset of interrelated components that work together to accomplish a purpose. Basically, there are three major components in every system, namely input, processing and output.

In a system the different components are connected with each other and they are interdependent. For example, Human body represents a complete natural system. We are also bound by many national systems political system, economic system, educational system and so forth. The objective of the system demand that some output is produced as a result of processing the suitable inputs.

The following simple diagram may be used to explain the conceptual components of a system.

**Figure 1. Components of a system**

##### **Classification of systems**

Systems can be classified either as open or closed systems. This classification is based on how a system interacts with its environment. A system's environment includes all factors surrounding the system. The description of open and closed systems are given below.

##### **Closed and Open Systems**

In systems theory, a distinction is made between open systems and closed systems. A closed system is a system, which is isolated from its environment and independent of it. That is, a closed system does not interact with its environment. An open system is a system connected to and interacting with its environment. An open system is a system connected to and interacting with its environment. It can also adapt to changing conditions. It can receive inputs
