Down Detour Road Eric J. Cesal, 2010-08-06 A young architect's search for new architectural values in a time of economic crisis I paused at the stoop and thought this could be the basis of a good book The story of a young man who went deep into the bowels of the academy in order to understand architecture and found it had been on his doorstep all along This had an air of hokeyness about it but it had been a tough couple of days and I was feeling sentimental about the warm confines of the studio which had unceremoniously discharged me upon the world from Down Detour Road What does it say about the value of architecture that as the world faces economic and ecological crises unprecedented numbers of architects are out of work This is the question that confronted architect Eric Cesal as he finished graduate school at the onset of the worst financial meltdown in a generation Down Detour Road is his journey one that begins off course and ends in a hopeful new vision of architecture Like many architects of his generation Cesal confronts a cold reality Architects may assure each other of their own importance but society has come to view architecture as a luxury it can do without For Cesal this recognition becomes an occasion to rethink architecture and its value from the very core He argues that the times demand a new architecture an empowered architecture that is useful and relevant New architectural values emerge as our cultural values shift from high risks to safe bets from strong portfolios to strong communities and from clean lines to clean energy This is not a book about how to run a firm or a profession it doesn't predict the future of architectural form or aesthetics It is a personal story and in many ways a generational one a story that follows its author on a winding detour across the country around the profession and into a new architectural reality

Claims, Disputes and Litigation Involving BIM Jason Dougherty, 2015-06-12 Are you unsure about the current US legal environment with respect to BIM and VDC the evolving standards of care for design and construction professionals using BIM and VDC what practical methods and techniques can be used for analyzing construction claims and disputes involving BIM technologies and VDC processes Building Information Modeling BIM technologies and Virtual Design and Construction VDC processes are aggressively and fundamentally changing the design construction and operation of buildings Supporters of BIM have highlighted the potential these technologies have to reduce the need for claims disputes and litigation but evidence from several early sources shows they are not universally successful in this This timely and unique book provides crucial new

methods for analyzing construction disputes in this emerging AEC technological landscape It explains how BIM VDC has significantly altered the production and delivery of construction drawings quantity surveys and schedules and how these changes might impact construction disputes The findings and advice in this book are indispensable to any stakeholder in a construction project using BIM It will help Contractors Cost Managers Architects Building Designers Quantity Surveyors and Project Managers to navigate and understand their responsibilities and exposure to risk when working with this new technology

Ethics and the Practice of Architecture Barry Wasserman, Patrick J. Sullivan, Gregory Palermo, 2000-03-07 From theory to practice a unique well rounded guide to ethics for today's architect How does an architect assist a community in evaluating alternative designs Resolve a dispute with a contractor Take into account a project's impact on the natural environment When it comes to questions like these making decisions about what ought to be done or what is the best or right solution requires more than sound technical knowledge and strong design talent It demands a solid understanding of the ethical issues that lie at the heart of architectural practice Ethics and the Practice of Architecture offers a complete broad based introduction to this crucial subject First it examines basic ethical theories and their application to architecture and discusses different ways of identifying ethical content in architecture Bridging the gap between theory and practice the second part of the book surveys different professional settings and building project processes that frequently hold ethical concerns and charts the ethical mandates that arise from them In the final section of the book thirty case studies explore a wide range of ethical dilemmas encountered in architectural practice with useful guidance on how to work through them effectively Arranged by topics that span the key phases of a project from pre design through post occupancy evaluation these case studies allow a detailed look at ethical concerns in real life situations where multiple issues are often at stake Providing a practical framework for the exploration of ethical issues in architecture today Ethics and the Practice of Architecture is an excellent resource for present and future architects in all areas of the field

Mapping the Global Architect of Alterity Michael

Jenson, 2014-03-21 Due to globalization cultural spaces are now developing with no tangible connection to geographical place The territorial logic traditionally used to underpin architecture and envision our built environment is being radically altered forcing the adoption of a new method of conceptualizing space geography and what constitutes architectural practice Construction techniques design sensibilities and cultural identities are being transformed as technology transports us to places that were previously unreachable The resultant globalized architect must become more than just an artful visionary but also a master of the art of the political nudge willing to act within multiple mediums and at the simultaneous scales of a chaotic new world disorder Though fearless they must also be responsible inherently understanding the necessity to align bold visions with the mundane details of the everyday in ways that are culturally flexible and accepting of change The potential for what must be considered the legitimate practice of the architect must move from a purely material venue to one more directly engaged in the chaos of the larger economic political and social spheres of a globalizing world The issues and possible interactions with globalization contained in this text exemplify ways that architecture is transforming into a more flexible and fluid interdisciplinary version of its traditional self in order to rise to challenges of this new international terrain A theme runs throughout in the form of a call that architects must conceptually re construct their frames of reference to better align with the demands of a rapidly globalizing world
