Electromagnetic Ergonomics Jolanta Karpowicz, 2023-09-07 Ergonomics is the branch of engineering science in which biological science is used to study the relationship between workers and their environments Because of the use of electricity for many purposes one environmental factor that has become omnipresent today is the electromagnetic field also referred to as electromagnetic

radiation or a fraction of the non ionizing radiation The complex interactions of electromagnetic energy with material objects contribute to ergonomics issues because they can cause health hazards in workers trigger accidental situations limit the ability of workers to work safely and disturb the function of electronic devices including medical implants etc A better understanding of complex electromagnetic issues in the work environment is considered in this book This title will be beneficial to workers affected by electromagnetic hazards including wireless transfer of information or power wireless induction heating joining metal elements with electric supplied techniques capacitive heating of dielectric materials physiotherapeutic or cosmetic electromagnetic treatments antitheft gates and other monitoring or control systems using wireless solutions electric transportation and many more It will help prevent common misunderstandings about electromagnetic hazards and sufficiently reduce where they appear Electromagnetic Ergonomics is designed to have a positive influence on public health and worker safety in the work environment and brings broad benefits in particular with respect to research planning and the interpretation of the results as well as the implementation of science based evidence regarding the evaluation and elimination of EMF hazards in the operations of enterprises and environmental labor and sanitary inspections as well as government regulators responsible for environmental safety issues in the workplace and the daily life environment
