The fashion apparel industry has significantly evolved, particularly over the last 20 years. The changing dynamics of the fashion industry have forced retailers to desire low cost and flexibility in design, quality, and speed to market, key strategies to maintain a profitable position in the increasingly demanding market. This article reviews the literature on changes that have happened in the fashion apparel industry since the 1990s, highlighting the emergence of a concept of 'throwaway' or fast fashion. It describes fast fashion from a supplier as well as a consumer's perspective, and draws attention to several potential research issues.

Keywords: fast fashion; supplier; consumer; quick response; fashion season

The fashion apparel industry has significantly evolved, particularly over the last 20 years, when the boundaries of the industry started to expand (Djelic and Ainamo 1999). The changing dynamics of the fashion industry since then, such as the fading of mass production, increase in number of fashion seasons, and modified structural characteristics in the supply chain have forced retailers to desire low cost and flexibility in design, quality, delivery and speed to market (Doyle, Moore, and Morgan 2006). In addition to speed to market and design, marketing and capital investment have also been identified as the driving forces of competitiveness in the fashion apparel industry (Sinha 2006). Franks (2000) suggested 'sense and respond' as the key strategy to maintain a profitable position in the increasingly dynamic and demanding market. A key defining characteristic of rapid responsiveness and greater flexibility, in this context, is to maintain closer relationships between suppliers and buyers (Wheelright and Clark 1992).

Looking at the basic structure of the fashion industry until the late 1980s, traditionally fashion apparel retailers used their capability of forecasting consumer demand and fashion trends (known as ready-to-wear) long before the actual time of consumption in order to compete in the market (Guercini 2001). However, recent years have seen fashion retailers compete with others by ensuring speed to market with their ability to provide rapidly the fashion trends revealed by fashion shows and runways. According to Taplin (1999), such retailers could be credited with the adoption of 'quick fashion' that is an outcome of an unplanned process on the reduced time gap between designing and consumption on a seasonal basis.
