Feenstra International Trade Solutions:

International Trade in Services and Intangibles in the Era of Globalization Marshall B. Reinsdorf, Matthew J. Slaughter, 2009-08-01 Quantitative measures of international exchange have historically focused on trade in tangible products or capital. However, services have recently become a larger portion of developed economies and international trade and will only increase in the future. In *International Trade in Services and Intangibles in the Era of Globalization*, Marshall Reinsdorf and Matthew J. Slaughter examine new and emerging patterns of trade, especially the growing importance of transactions involving services or intangible assets such as intellectual property. A distinguished team of contributors analyzes the challenges involved in measuring trade in intangibles, the comparative advantages enjoyed by United States service industries, and the heightened international competition for jobs, capital investment, economic growth, and tax revenue that results from trade in services. This comprehensive volume will be necessary reading for scholars seeking to understand the rapidly changing global economy. *International Provision of Trade Services, Trade, and Fragmentation* Alan V. Deardorff, 2001 Deardorff examines the special role that trade liberalization in services industries can play in stimulating trade in both services and goods. International trade in goods requires inputs from such trade services as transportation, insurance, and finance; for example, restrictions on services across borders and within foreign countries add costs and barriers to international trade. Liberalizing trade in services could also facilitate trade in goods, providing more benefits than one might expect from analysis merely of the services trade.

International Trade in Services and Domestic Regulations Panagiotis Delimatsis, 2007-12-27 In 2005, the WTO Appellate Body ruled that the United States' total prohibition on cross-border gambling services was unlawful under the General Agreement on Trade in Services (GATS). The questions raised by the case—whether and how a Government could block service provision on moral grounds—went to the heart of key controversies surrounding international economic law. How do you reconcile a liberal system of international trade in services with national governments' desire to protect social values through service regulation? How much control are the WTO members willing to transfer to the WTO? How much regulatory diversity can the international trading system withstand? This book provides a comprehensive analysis of the regulation of services under the WTO's GATS Agreement. Through a thorough examination of the GATS negotiation history, substantive provisions, judicial interpretation, and ongoing reform process, the book presents a clear picture of how the multilateral trading system justifies and tolerates regulatory diversity. In this respect, the book focuses on the core general principles of necessity and transparency, which would allow the assessment of the consistency with the GATS of domestic regulations in services at a horizontal cross-sectoral level. In addition, the book reviews with a critical eye the ongoing GATS negotiations on the creation of rules on domestic regulations.

International Business V.K. Bhalla, 2013 *International Business* **Ecosystem Services and Global Trade of Natural Resources** Thomas Koellner, 2013-06-17 The utilization of natural resources to satisfy worldwide growing consumption of goods and

services has severe ecological consequences. Aside from the projected doubling of food consumption in the next fifty years, the growing trade of biofuels and other commodities is a global challenge as the economic activities in the primary sector, i.e., mining, fisheries, aquaculture, forestry, and agriculture, can damage biodiversity and ecosystem services. This should be taken into account in the decision making affecting the global value chains linking consumer, retailer, processor, and producer in the North and the South. To cover the topic of ecosystem services and global trade, this book is organized into four major parts. Part 1 gives the theoretical framework from an ecological, economic, and political perspective. Part 2 explores how internationally traded biophysical commodities from agriculture, forestry, and fisheries translate into a virtual flow of land, freshwater, and marine ecosystems. Part 3 describes how two widely used accounting tools, i.e., Life Cycle Assessment and Green National Accounts, deal with international aspects of ecosystem services, and Part 4 shows how instruments like labelling, bans, or payments for ecosystem services in the private and public sector can influence trade patterns and the management of ecosystem services. This collection is a valuable contribution to the global change science dealing with ecosystem services. It illustrates the consequences of international trade on global ecosystem services and provides an overview of accounting tools and of market-based policy instruments to address negative and positive externalities. The book is certainly innovative because it brings together research findings from distinct disciplines, especially Industrial Ecology and Ecosystem Sciences, as well as Environmental Economics and Political Science.

Trade in Services in the Asia-Pacific Region Takatoshi Ito, Anne O. Krueger, 2007-11-01. In recent years, the tremendous growth of the service sector, including international trade in services, has outstripped that of manufacturing in many industrialized nations. As the importance of services has grown, economists have begun to focus on policy issues raised by them and have tried to understand what, if any, differences there are between production and delivery of goods and services. This volume is the first book-length attempt to analyze trade in services in the Asia-Pacific region. Contributors provide overviews of basic issues involved in studying the service sector, investigate the impact of increasing trade in services on the economies of Taiwan, Korea, and Hong Kong, present detailed analyses of specific service sectors (telecommunications, financial services, international tourism, and accounting), and extend our understanding of trade in services beyond the usual concept measured in balance of payment statistics to include indirect services and services undertaken abroad by subsidiaries and affiliates.

International Trade in Services Olivier Cattaneo, Michael Engman, Sebastian Seitz, Robert M. Stern, 2010-06-24. The services sector is key to economic growth, competitiveness, and poverty alleviation. Comprising more than two thirds of the world economy, services are now commonly traded across borders, helped by technological progress and the increased mobility of persons. In recent years, a number of developing countries have looked at trade in services as a means to both respond to domestic supply shortages and to diversify and boost exports. Any country can tap into the trade potential of services, but not every country can become a services hub across sectors. The opening of the services sector potentially comes with large benefits, but also

fears and costs that should not be overlooked This book provides useful guidelines for the assessment of a country's trade potential and a roadmap for successful opening and export promotion in select services sectors It looks at both the effects of increased imports and exports and provides concrete examples of developing country approaches that have either succeeded or failed to maximize the benefits and minimize the risks of opening It focuses on sectors that have been rarely analyzed through the trade lens and or have a fast growing trade potential for developing countries These sectors are accounting construction distribution engineering environmental health information technology and legal services This book is designed for non trade specialists to understand how trade can help improve access to key services in developing countries and for trade specialists to understand the specific characteristics of each individual sector It will be a useful tool for governments to design successful trade opening or promotion strategies and for the private sector and consumers to advocate sound domestic policy reforms accompanying an offensive trade agenda

Handbook of International Trade and Transportation Bruce A. Blonigen, Wesley W. Wilson, 2018-01-26 International trade has grown rapidly over the past half century accommodated by the transportation industry through concomitant growth and technological change But while the connection between transport and trade flows is clear the academic literature often looks at these two issues separately This Handbook is unique in pulling together the key insights of each field while highlighting what we know about their intersection and ideas for future research in this relatively unexamined but growing area of study

requirements needed to build and sustain outsourcing relationships and ethical supply chain issues There are also sections exploring the impact of outsourcing on organizational structures the long term effects legal issues management control and inter firm relationships as well as case studies from both the public and private sector on the practical side of outsourcing The book will appeal to practitioners and researchers alike

Liberalizing Trade in Services Bernard M. Hoekman, 2006
Abstract Since the mid 1980s a substantial amount of research has been undertaken on trade in services Much of this is inspired by the World Trade Organization or regional trade agreements especially the European Union but an increasing number of papers focus on the impacts of services sector liberalization This paper surveys the literature focusing on contributions that investigate the determinants of international trade and investment in services the potential gains from greater trade and liberalization and efforts to cooperate to achieve such liberalization through trade agreements It concludes that there is increasing evidence that services liberalization is an important source of potential welfare gains but relatively little research has been done that can inform the design of international cooperation both trade agreements and development assistance so as to more effectively promote development objectives

The Liberalization of Maritime Transport Services Benjamin Parameswaran, 2012-12-06 Despite multiple efforts on the bilateral regional and multilateral level to create uniform or at least harmonized rules for commercial operations and practices in the maritime transport sector and to liberalize maritime transport services by tearing down the barriers that exist in that sector there is until today no global regime regulating or rather deregulating the supply of maritime transport services and ensuring open markets In this situation private economic actors are confronted with substantial legal uncertainty This book provides a detailed analysis of the history of maritime transport services in the Uruguay and post Uruguay Round negotiations and the role of the sector in the ongoing Doha Round talks where Member States have the opportunity to work towards a global regime ensuring the progressive liberalization of the sector The reader will be confronted with an extensive overview of the role of maritime transport services in the WTO GATS framework a topic basically uncovered in the literature so far

Challenges to the Global Trading System Sumner La Croix, Peter A. Petri, 2007-03-21 In this book the participants of the thirtieth Pacific Trade and Development Conference debate whether global negotiations have ended once and for all or are suffering temporarily from globalization fatigue
