Multinationals in Canada: Theory, Performance and Economic Impact A.M. Rugman, 2013-03-09 Multinational enterprises have become one of the distinctive institutions of our times Controversy over their economic and political effects and over appropriate public policy responses has become common in home and host countries and in international agencies Much of this debate is reminiscent of the role of large corporations generally particularly in their interregional and intergroup effects The multinational setting however would have raised distinctive issues even apart from the strong surges of nationalism and anti imperialism which have marked recent history Canada has a long and unusual experience with such enterprises Foreign control of capital in the nonfinancial industries manufacturing petroleum and gas other mining and smelting utilities merchandising was already 20 percent in 1930 and 25 percent in 1948 It rose to 36 percent by the late 1960s but has since receded to about 30 percent In 1975 fully 55 percent of the capital in manufacturing was controlled outside Canada as was 72 per cent of that in petroleum and gas and 58 percent in other mining These figures exceed those of other developed countries although there have been striking increases in recent decades About 80 percent of the direct investment capital in Canada is from the United States Recently Canadians have become aware of a surge of Canadian direct investment abroad which on a flow basis has exceeded inflows exclusive of retained earnings for most of the 1970s

Multinationalism, Japanese Style Terutomo Ozawa, 2014-07-14 Analyzing the motivating forces behind the trend toward Japanese direct overseas production this work examines the appreciation of the yen rising labor and energy costs environmental decay shortages of industrial sites and critical dependence on overseas resources as factors in prompting Japanese firms to transfer production facilities abroad Originally published in 1979 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve

the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Network Data Envelopment Analysis Chiang Kao, 2016-08-23 This book presents the underlying theory model development and applications of network Data Envelopment Analysis DEA in a systematic way The field of network DEA extends and complements conventional DEA by considering not only inputs and outputs when measuring system efficiency but also the internal structure of the system being analyzed By analyzing the efficiency of individual internal components and more particularly by studying the effects of relationships among components which are modeled and implemented by means of various network structures the network DEA approach is able to help identify and manage the specific components that contribute inefficiencies into the overall systems This relatively new approach comprises an important analytical tool based on mathematical programming techniques with valuable implications to production and operations management The existing models for measuring the efficiency of systems of specific network structures are also discussed and the relationships between the system and component efficiencies are explored This book should be able to inspire new research and new applications based on the current state of the art Performance evaluation is an important task in management and is needed to i better understand the past accomplishments of an organization and ii plan for its future development However this task becomes rather challenging when multiple performance metrics are involved DEA is a powerful tool to cope with such issues For systems or operations composed of interrelated processes managers need to know how the performances of the various processes evaluated and how they are aggregated to form the overall performance of the system This book provides an advanced exposition on performance evaluation of systems with network structures It explores the network nature of most production and operation systems and explains why network analyses are necessary

Competing Schools of Economic Thought Lefteris Tsoulfidis, 2010-06-29 1 1 Introduction This book was born out of our reaction to the way in which the usual texts cover the subject of the history of economic thought In most of these texts there is a tendency to emphasize the similarities and differences between all the important economists and form a repository of encyclopedic knowledge where one can study the seemingly important economic ideas In this book we argue that it is much more fruitful to focus on the essential ideas of each and every school of economic thought and relate them to present day problems than to engage into a sterile discussion of the ideas and the lives of the great economists of the past Thus although this book deals with the history of economic thought it does not necessarily follow a historic in the sense of the order of presentation approach but rather a logical one that is to say it deals with the social conditions associated with the emergence of a school of economic thought its evolution and its contemporary in uence One cannot write a book on the history of economic thought without writing separate chapters on the major economists of the past that is Adam Smith David Ricardo Karl Marx and J M Keynes Of course these economists formed schools of economic thought that is the classical and the Keynesian **Sugarcane Production Residues** University of Florida.
