Final Year Project Proposal For Software Engineering Students:

Planning and Implementing your Final Year Project — with Success! Mikael Berndtsson, Jörgen Hansson, B. Olsson, Björn Lundell, 2013-03-09 Don't wait for someone to write a book you want to read write it yourself! This was the message we received when we asked around for a book that described final year projects for computer science and information systems. In this book we have gathered our experiences of conducting and supervising final year projects in computer science and information systems. In this book we present a process for conducting final year projects. This process was developed at the University of Skovde Sweden. It has been applied successfully to a wide spectrum of projects with many different subject areas and styles of project. Typical subject areas have included for example artificial intelligence, theoretical computer science, databases, data communication, distributed systems, human computer interaction, operating systems, real time systems, software engineering systems, analysis and technology transfer. The styles of projects have been both theoretical and more empirically oriented and have included both science and technology oriented projects. It is our hope that this book will be a valuable companion to the three actors involved in a final year project: student, supervisor and examiner. In addition to the general descriptions and advice provided in this book we want to emphasise that it is important for students to find out the exact requirements at the department where the project is undertaken. May 2002 Mikael Berndtsson, Jorgen Hansson, Bjorn Olsson, Bjorn Lundell. Acknowledgements: This book would not have been possible without the support of a number of people.

Senior Design Projects in Mechanical Engineering Yongsheng Ma, Yiming Rong, 2021-11-10 This book offers invaluable insights about the full spectrum of core design course contents systematically and in detail. This book is for instructors and students who are involved in teaching and learning of capstone senior design projects in mechanical engineering. It consists of 17 chapters over 300 illustrations with many real world student project examples. The main project processes are grouped into three phases: i.e. project scoping and specification, conceptual design and detail design, and each has dedicated two chapters of process description and report content prescription respectively. The basic principles and engineering process flow are well applicable for professional development of mechanical design engineers. CAD, CAM, CAE technologies are commonly used within many project examples. Thematic chapters also cover student teamwork organization and evaluation, project management, design standards and regulations, and rubrics of course activity grading. Key criteria of successful course accreditation and graduation attributes are discussed in details. In summary, it is a handy textbook for the capstone design project course in mechanical engineering and an insightful teaching guidebook for engineering design instructors.

Projects in the Computing Curriculum Michael Holcombe, Andrew F. Stratton, Sally A. Fincher, Gary Griffiths, 2012-12-06 Dr Peter Milton, Director of Programme Review, Quality Assurance Agency. I am grateful to the authors for giving me the opportunity to write this foreword, mainly because it represents the first occasion that the Fund for the Development of Teaching and Learning (FDTL) has led directly to a publication such as this. In my former capacity as Director

of Quality Assessment at the Higher Education Funding Council for England HEFCE I chaired the FDTL Committee during 1996-7 and am delighted to see the projects which were selected so painstakingly leading to successful outcomes. Assessment of the quality of higher education HE was introduced in 1993 and was intended to improve public information about what was on offer in British universities and colleges as well as to assist in the enhancement of educational opportunities for students. This was part of a larger agenda in which educational quality and the standards achieved by students have come under increasing scrutiny with a long term objective of linking funding allocations to the quality of the provision. It was in this context that the FDTL Initiative was launched in 1995 to support projects aimed at stimulating developments in teaching and learning and to encourage the dissemination of good practice across the HE sector. Good practice is identified through the process of quality assessment and bids for funding can only be made by those institutions which have demonstrated high quality provision. To date the programme includes 63 projects drawn from 23 subject areas.
