Jason Kingdon,2012-12-06 A fundamental objective of Artificial Intelligence AI is the creation of intelligent computer programs In more modest terms AI is simply concerned with expanding the repertoire of computer applications into new domains and to new levels of efficiency The motivation for this effort comes from many sources At a practical level there is always a demand for achieving things in more efficient ways Equally there is the technical challenge of building programs that allow a machine to do something a machine has never done before Both of these desires are contained within AI and both provide the inspirational force behind its development In terms of satisfying both of these desires there can be no better example than machine learning Machines that can learn have an inbuilt efficiency The same software can be applied in many applications and in many circumstances The machine can adapt its behaviour so as to meet the demands of new or changing environments without the need for costly reprogramming In addition a machine that can learn can be applied in new domains with the genuine potential for innovation In this sense a machine that can learn can be applied in areas where little is known about possible causal relationships and even in circumstances where causal relationships are judged not to exist This last aspect is of major significance when considering machine learning as applied to financial forecasting

comparative analysis of the individual methods is provided The book is intended for readers from the ranks of academic staff students of universities of economics but also the scientists and practitioners dealing with the time series prediction From the point of view of practical application it could provide useful information for speculators and traders on financial markets especially the commodity markets

Forecasting Financial Markets Using Neural Networks Jason E. Kutsurelis, 1998 This research examines and analyzes the use of neural networks as a forecasting tool Specifically a neural network's ability to predict future trends of Stock Market Indices is tested Accuracy is compared against a traditional forecasting method multiple linear regression analysis Finally the probability of the model's forecast being correct is calculated using conditional probabilities While only briefly discussing neural network theory this research determines the feasibility and practicality of using neural networks as a forecasting tool for the individual investor This study builds upon the work done by Edward Gately in his book *Neural Networks for Financial Forecasting* This research validates the work of Gately and describes the development of a neural network that achieved a 93.3 percent probability of predicting a market rise and an 88.07 percent probability of predicting a market drop in the S P500 It was concluded that neural networks do have the capability to forecast financial markets and if properly trained the individual investor could benefit from the use of this forecasting tool

Neural Network Time Series E. Michael Azoff, 1994-09-27 Comprehensively specified benchmarks are provided including weight values drawn from time series examples in chaos theory and financial futures The book covers data preprocessing random walk theory trading systems and risk analysis It also provides a literature review a tutorial on backpropagation and a chapter on further reading and software

Forecasting Financial Markets Using Neural Networks Jason Kutsurelis, Naval Postgraduate School (U.S.), 1998-09-01 This research examines and analyzes the use of neural networks as a forecasting tool Specifically a neural network's ability to predict future trends of Stock Market Indices is tested Accuracy is compared against a traditional forecasting method multiple linear regression analysis Finally the probability of the model's forecast being correct is calculated using conditional probabilities While only briefly discussing neural network theory this research determines the feasibility and practicality of using neural networks as a forecasting tool for the individual investor This study builds upon the work done by Edward Gately in his book *Neural Networks for Financial Forecasting* This research validates the work of Gately and describes the development of a neural network that achieved a 93.3 percent probability of predicting a market rise and an 88.07 percent probability of predicting a market drop in the S P500 It was concluded that neural networks do have the capability to forecast financial markets and if properly trained the individual investor could benefit from the use of this forecasting tool

An Algorithmic Crystal Ball: Forecasts-based on Machine Learning Jin-Kyu Jung, Manasa Patnam, Anna Ter-Martirosyan, 2018-11-01 Forecasting macroeconomic variables is key to developing a view on a country's economic outlook Most traditional forecasting models rely on fitting data to a pre specified relationship between input and output variables thereby assuming a specific functional and stochastic process

underlying that process We pursue a new approach to forecasting by employing a number of machine learning algorithms a method that is data driven and imposing limited restrictions on the nature of the true relationship between input and output variables We apply the Elastic Net SuperLearner and Recurring Neural Network algorithms on macro data of seven broadly representative advanced and emerging economies and find that these algorithms can outperform traditional statistical models thereby offering a relevant addition to the field of economic forecasting

Forecasting Jet Fuel Prices Using Artificial Neural Networks Mary A. Kasprzak, 1995 Artificial neural networks provide a new approach to commodity forecasting that does not require algorithm or rule development Neural networks have been deemed successful in applications involving optimization classification identification pattern recognition and time series forecasting With the advent of user friendly commercially available software packages that work in a spreadsheet environment such as Neural Works Predict by NeuralWare more people can take advantage of the power of artificial neural networks This thesis provides an introduction to neural networks and reviews two recent studies of forecasting commodities prices This study also develops a neural network model using Neural Works Predict that forecasts jet fuel prices for the Defense Fuel Supply Center DFSC In addition the results developed are compared to the output of an econometric regression model specifically the Department of Energy's Short Term Integrated Forecasting System STWS model The Predict artificial neural network model produced more accurate results and reduced the contribution of outliers more effectively than the STIFS model thus producing a more robust model
