

Biology Notes

Form Three

Classification II

General Principles of Classification

- Classification is the science that puts organisms into distinct groups to make their study easy and systematic.
- Modern scientific classification is based on structure and functions.
- Organisms with similar anatomical and morphological characteristics are placed in one group while those with different structures are grouped separately.
- Modern studies in genetics and cell biochemistry are used to give additional help in classifying organisms.
- There are seven major taxonomic groups.
- The kingdom is the largest group.
- Others are phylum (division for plants) class, order, family, genus and species, the smallest.

Binomial Nomenclature

- Living organisms are named using Latin or Latinised names.
- Every organism has two names.
- This double naming is called *binomial nomenclature*.
- This system of naming was devised by Carolus Linnæus in the 18th Century.
- The first name is the generic name - the name of the genus.
- The second name is the name of the species.
- The generic name starts with a capital letter while that of the species starts with a small letter.
- The names are written in italics or are underlined in manuscripts.

Examples:

- Bean = *Phaseolus vulgaris*.
- *Phaseolus* is the generic name,
- *vulgaris* is specific name.
- Dog = *Canis familiaris*.
- *Canis* is the generic name
- *familiaris* the specific name.

General Characteristics of Kingdoms

Organisms are classified into five kingdoms.

- *Monera*,
- *Protocista*,
- *Fungi*,
- *Plantae*
- *Animalia*.

Form Three Biology Note Hkedcity
