The World Yearbook of Robotics Research and Development Sbornik Statei,2013-04-17 How quickly the technological flavour of the month changes At the beginning of the 1980 s many saw robotics as being something of a panacea for those problems in the manufacturing industries which had been exacerbated by the world recession Those working at the time in the field of robotics stressed that robots themselves were only part of the solution Yet in many quarters the hype for the new technology apparently knew few bounds

resulting inexorably in many industries painfully discovering for themselves a new realism closely followed by disillusionment. In its wider sense the term robotics covers an extremely broad spectrum of technologies ranging from extremely flexible highly sensory and integrated systems capable of handling a very diverse product range through to comparatively inflexible high volume systems which can merely handle slightly different variations of the same basic product. As a result of the one buzzword referring to such a variety of actual system types the disillusionment which started to become apparent during the early 1980s acted as something of a double edged sword. A given company might consider a particular robotics based technological solution to its production problems find that it was unsuitable and so renounce all robotics approaches as inappropriate. Yet just because one position on that spectrum of technological solutions was unsuitable for the company should not have led them to assume that there was no other robotics solution that was appropriate.
