The Economic Appraisal of Investment Projects at the EIB - 2nd Edition European Investment Bank, 2023-05-03

The EIB performs economic appraisals of the projects it considers for investment. Thereby it ensures that projects add sufficient value to society to merit support. Beyond considerations of financial profitability to investors, the economic appraisal also addresses the wider value generated by the project to society. This comprises benefits and costs to project final users, the taxpayer and third parties, allowing for all applicable market failures such as environmental externalities. Since the publication of the first edition of this document in 2013, the EIB has been transformed into the EU Climate Bank. The way it values carbon emissions has been updated, as have various other elements of economic appraisal, in keeping with developments in the specialist literature, policy and practice. This second edition of the document gives the reader an updated view of how economic appraisal is currently conducted at the Bank. It also mentions the areas on which the EIB is currently working to ensure that it is at the forefront of economic appraisal practice. Project Valuation Techniques for

Fundamentals of Investment Appraisal Martina Röhrich, 2010-10-01

How to make sound investment decisions. This book is based on long term experience with students especially at the School of International Business of Bremen University of Applied Sciences. For a better understanding a case study is constructed to illustrate all methods discussed. Written in an easily understood style it focuses on the reality of student life as well as of practitioners. The goal of the book is to pace a sure way through the variety of methods. Mathematical basics are specifically explained in detail. This book shows clearly why there are different methods in investment appraisal and on where to focus in a given situation. As all methods are introduced by the same case study it is easy to compare and evaluate the results. The statements in the text are further consolidated by abstracts and evaluations of each of the methods. Exercises with extensive solutions will lead to the confidence which is necessary for an ease of handling the investment appraisal techniques and for a good preparation for students exams. German and international students at universities and other institutions of higher education will find this book an excellent systematic preparation for their exams. It is also directed toward members of the general public who need expert guidance in making professional investment decisions. Due to the increasing mobility of students and the internationalisation of many economic or business curricula not only do German students tend to study more abroad but also foreign students tend to study more in Germany. In German universities the number of courses in the English language is also increasing. That is why I have written this text in English. A companion volume in German entitled *Grundlagen der Investitionsrechnung Eine Darstellung anhand einer Fallstudie* is also available. In both textbooks the pages are constructed identically. Using both textbooks simultaneously will help those students who still lack the necessary business vocabulary in the respective language to reasonably follow a class in English or German. This book clearly closes an existing gap in the literature. This is the first book in English about capital expenditure budgeting in the sense as it is usually taught in German higher education institutions. As a result international students now have literature covering the contents of a course in investment appraisal in the form of an easy to read case study with easily understood graphics and notations.

Improving the Efficiency of Public Investment in Infrastructure in Ed Hearne, 2025-03-26 Against a backdrop of constrained fiscal space Belgium faces considerable investment needs Improving infrastructure governance processes can enhance investment efficiency achieving more bang for each investment buck This paper analyzes public investment management practices in Belgium highlighting several areas for improvement by the federal and regional governments The findings indicate an absence of clear infrastructure strategies weak practices for project preparation including project appraisal selection and approval processes fragmented governance and an absence of coordination within and between entities The gatekeeping role of the Ministry of Finance common in most

advanced economies is largely absent in each of the entities in Belgium's federal state. Notwithstanding these areas for improvement, there are examples of good practices in individual agencies and a number of promising reform initiatives are underway. The paper recommends taking a strategic and coordinated approach to investment planning, establishing standardized project preparation practices, enhancing coordination between federated entities and with the federal entity, and strengthening the role of departments of finance budget in the public investment process. Together, these steps can improve infrastructure governance and support enhanced investment efficiency.
