Introduction to Crime Scene Investigation (CSI)

- The goal of crime scene investigation is to recognize, document and collect evidence at a crime scene
- A single hair or clothing fiber can allow a crime to be reconstructed and lead police to the responsible person
- Solving a crime depends on piecing evidence together to form a picture of what happened at the scene

Principle of Exchange

- Established by Dr. Edmund Locard, who directed one of the world's first forensic labs in Lyon, France
- \*Locard's Principle of Exchange:
  - When a person comes in contact w/ an object or another person, cross-transfer of physical material can occur
- Evidence can be found on both persons or objects
  - This evidence acts as a silent witness to the crime
  - Examples: Hair, skin cells, clothing fibers, pollen, make up, debris from clothing, glass fragments

Principle of Exchange

- This physical evidence is called trace evidence
  - Trace evidence: small but measurable amounts of physical/ biological material found at a crime scene
  - Common examples: pet hair on rugs/clothes, fibers from clothing, hair on a brush, a drop of blood, soil tracked into a house on a pair of shoes, fingernails, paintchips, a used tissue, and broken glass
- Second Part of Locard's principle states that the intensity, duration, and nature of the materials in contact determine the extent of the exchange
  - Example: a fist fight will leave more evidence as opposed to brushing against someone's arm

police and prosecutors making wide spread use of DNA high tech science seems to have become the handmaiden of law enforcement But this is a myth asserts law professor and nationally known expert on police profiling David A Harris In fact most of law enforcement does not embrace science it rejects it instead resisting it vigorously The question at the heart of this book is why Eyewitness identifications procedures using simultaneous lineups showing the witness six persons together as police have traditionally done produces a significant number of incorrect identifications Interrogations that include threats of harsh penalties and untruths about the existence of evidence proving the suspect s guilt significantly increase the prospect of an innocent person confessing falsely Fingerprint matching does not use probability calculations based on collected and standardized data to generate conclusions but rather human interpretation and judgment Examiners generally claim a zero rate of error an untenable claim in the face of publicly known errors by the best examiners in the U S Failed Evidence explores the real reasons that police and prosecutors resist scientific change and it lays out a concrete plan to bring law enforcement into the scientific present Written in a crisp and engaging style free of legal and scientific jargon Failed Evidence will explain to police and prosecutors political leaders and policy makers as well as other experts and anyone else who cares about how law enforcement does its job where we should go from here Because only if we understand why law enforcement resists science will we be able to break through this resistance and convince police and prosecutors to rely on the best that science has to offer Justice demands no less Visit the author s blog here *Pioneers in Forensic Science* Kelly M. This book identifies traces and interrogates contemporary American culture s fascination with forensic science It looks to the many different sites genres and media where the forensic has become a cultural commonplace It turns firstly to the most visible spaces where forensic science has captured the collective imagination crime films and television programs In contemporary screen culture crime is increasingly framed as an area of scientific inquiry and even more frequently as an area of concern for female experts One of the central concerns of this book is the gendered nature of expert scientific knowledge as embodied by the ubiquitous character of the female investigator Steenberg argues that our fascination with the forensic depends on our equal fascination with and suspicion of women s bodies with the bodies of the women investigating and with the bodies of the mostly female victims under investigation Science in Evidence David H. Kaye,1997
