Automotive Lighting and Human Vision Burkard Wördenweber, Jörg Wallaschek, Peter Boyce, Donald D. Hoffman, 2007-03-13 It is possible to buy excellent books on human vision as well as about automotive lighting Unfortunately these books have little or no common content But in fact these fields do overlap Providing optimal conditions for human vision is what automotive lighting is all about Our motivation for writing this book arises from interdisciplinary studies of human vision and lighting Initially we intended the book to provide background information on human vision to engineers working in automotive lighting At the same time we planned to introduce basic concepts of automotive lighting to experts in human vision However because of the intricate connections between human vision and automotive lighting it turns out that the book provides new insights to anyone interested in either or both subjects The subject matter is complex and spans a number of disciplines from psychology to mechatronics Hence there are very few individuals who are experts in all fields Looking at the nature of human vision it is surprising to find out how much every one of us takes it for granted Rarely are we aware of how we use vision predominantly to verify our internal model of our surroundings Many accidents particularly at night stem from the fact that our internal model misrepresented a significant part of our surroundings Taking knowledge on human vision into account in the design of future automotive lighting systems reduces the risk of accidents at night

Stage Lighting Richard E. Dunham, 2015-10-30 The book's organization follows a layered approach that builds on basic principles Light as a Medium Part 1 Tools of a Lighting Designer Part 2 Design Fundamentals Part 3 and Lighting Applications Part 4 This presents students with a practical and logical sequence when learning basic concepts The full spectrum of the lighting design process is presented in detail giving students an example of

how one might develop a lighting design from script analysis through concept and plot development and all the way to an opening This detailed process with a step by step design approach gives students a plan to work from which they can later modify as they mature and gain confidence as designers The text contains a more comprehensive discussion of basic technology light as a physical phenomena and methodology of designs than is found in most introductory texts bridging the gap between introductory and advanced lighting courses The text will appeal to theatrical designers who want to venture into areas of lighting like architectural or virtual lighting design while at the same time gaining a solid grounding in the fundamentals of lighting design Lighting Design will also benefit illuminating engineers who want to move away from mere computational approaches in lighting and on to explore techniques along the design approaches of theatrical lighting design The final 9 chapters cover many specialty areas of lighting design highlighting the unique and shared qualities that exist between the different aspects of these elements Discussions involve traditional entertainment areas like theatre as well as lesser known facets of the industry including film video landscape lighting retail museum lighting virtual lighting concert spectacle performances and architectural lighting Models of design tasks demonstrate the actual use and development of plots sections schedules photometrics tables and cut sheets rather than simply talking about what they are This hands on approach provides students with a firm understanding of how to actually use these tools and processes

Assessment of Solid-State Lighting, Phase Two National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on Assessment of Solid-State Lighting, Phase 2, 2017-06-11 The standard incandescent light bulb which still works mainly as Thomas Edison invented it converts more than 90% of the consumed electricity into heat Given the availability of newer lighting technologies that convert a greater percentage of electricity into useful light there is potential to decrease the amount of energy used for lighting in both commercial and residential applications Although technologies such as compact fluorescent lamps CFLs have emerged in the past few decades and will help achieve the goal of increased energy efficiency solid state lighting SSL stands to play a large role in dramatically decreasing U S energy consumption for lighting Since the publication of the 2013 National Research Council report Assessment of Advanced Solid State Lighting the penetration of SSL has increased dramatically with a resulting savings in energy and costs that were foreshadowed by that study What was not anticipated then is the dramatic dislocation and restructuring of the SSL marketplace as cost reductions for light emitting diode LED components reduced profitability for LED manufacturers At the same time there has been the emergence of new applications for SSL which have the potential to create new markets and commercial opportunities for the SSL industry Assessment of Solid State Lighting Phase Two discusses these aspects of change highlighting the progress of commercialization and acceptance of SSL and reviewing the technical advances and challenges in achieving higher efficacy for LEDs and organic light emitting diodes This report will also discuss the recent trends in SSL manufacturing and opportunities for new applications and describe the role played by the Department of Energy DOE Lighting Program in the development of SSL
