monograph set out to correct this neglect      **Soft Computing** Luigi Fortuna, Gianguido Rizzotto, Mario Lavorgna, Giuseppe  
Nunnari, Maria Gabriella Xibilia, Riccardo Caponetto, 2012-12-06 In the last decade new artificial intelligence methods for the  
modelling and control of complex systems namely neural networks fuzzy logic and probabilistic reasoning have drawn the  
interest of researchers and engineers Recently the advantages achievable by using combinations of these methods which  
have independent origin and evolution have been pointed out generating a new paradigm which is now termed soft  
computing This new methodology subsumes the capabilities of neural networks for modelling non linear systems and for  
solving classification problems the power of fuzzy logic to represent approximate or heuristic reasoning and the large  
capabilities of evolutionary computation for problem optimisation The book presents a clear understanding of a new type of  
computation system the cellular neural network CNN which has been successfully applied to the solution of many heavy  
computation problems mainly in the fields of image processing and complex partial differential equations CNNs computation  
based systems represent new opportunities for improving the soft computation toolbox The application of soft computing to  
complex systems and in particular to chaotic systems with the generation of chaotic dynamics by using CNN is also described  
These aspects are of particular interest owing to their growing interest for research and application purposes Specific topics  
covered in the text include fuzzy logic control and neural networks artificial neural networks and their application in the  
modelling and control of dynamical systems evolutionary optimisation algorithms complex dynamics and cellular neural  
networks applications in urban traffic noise monitoring robot control and rapid thermal process systems      *Lezioni di*
