

A man with short brown hair and a light beard, wearing a dark suit, white shirt, and dark tie, is holding a tablet computer. He is standing in front of a wall with peeling, light-colored paint, revealing a darker surface underneath. The image is partially obscured by a blue vertical bar on the right side.

Predictive Modeling Applications in Actuarial Science: Volume 2, Case Studies in Insurance Edward W. Frees, Glenn Meyers, Richard A. Derrig, 2016-07-27. Predictive modeling uses data to forecast future events. It exploits relationships between explanatory variables and the predicted variables from past occurrences to predict future outcomes. Forecasting financial events is a core skill that actuaries routinely apply in insurance and other risk management applications. *Predictive Modeling Applications in Actuarial Science* emphasizes life long learning by developing tools in an insurance context providing the relevant actuarial applications and introducing advanced statistical techniques that can be used to gain a competitive advantage in situations with complex data. Volume 2 examines applications of predictive modeling. Where Volume 1 developed the foundations of predictive modeling, Volume 2 explores practical uses for techniques focusing on property and casualty insurance. Readers are exposed to a variety of techniques in concrete real life contexts that demonstrate their value and the overall value of predictive modeling for seasoned practicing analysts as well as
