Stancer, P.E. Garfinkel, V.M. Rakoff, 2012-12-06 to the Clinician Although huge quantities of drugs are dispensed daily by psychiatrists there appears to be insufficient concern about the short and long term effects of these exogenous agents on the recipients our patients Many clinicians have been trained at a time when knowledge of clinical psychopharmacology was superficial at best and recent trainees do not necessarily have access to newer constantly changing relevant information The busy clinician is frequently dependent upon the limited knowledge dispensed by the drug company representatives and naturally shies away from many of the more esoteric contributions appearing in the literature Because of the foregoing issues the Executive of the Clarke Institute of Psychiatry of the University of Toronto with the financial support of the Ministry of Health of the Government of Ontario organized an international symposium on May 14-17 1982 to bring together some of the acknowledged experts in clinical psychopharmacology This book is in part a reflection of that symposium The editors are aware that a contributed volume however tightly edited is not necessarily a textbook Notwithstanding this it was thought to be important to assemble expert opinion on current important issues of immediate concern to the practicing clinician With this in mind the chapters have been organized around five themes Schizophrenia Affective disorders and Anxiety are clearly important since they are the major targets of drug use in psychiatry Brain Mechanisms and Psychotropic Drugs Andrius Baskys, Gary Remington, 1996-03-14 Written by recognized experts in their fields Brain Mechanisms and Psychotropic Drugs integrates clinical psychopharmacology with basic neuroscience and offers the latest in treatment approaches for major psychiatric disorders The text is divided into three major sections The first two sections focus on basic neuroscience covering fundamental concepts such as ion channels synapses second messenger mechanisms and the aging brain The second section contains chapters on serotonin dopamine acetylcholine GABA glutamate and peptides The final section is clinically oriented and discusses major psychotropic drug classes antidepressants neuroleptics mood stabilizers benzodiazepines and cognition enhancing drugs This is a must have volume for all those involved in the clinical use of psychotropic medications from medical students to practitioners and researchers Das Gezeiten-Modell Phil Barker, Poppy Buchanan-Barker, 2020-07-13 Das Gezeitenmodell von Phil Barker und Poppy Buchanan Barker umschreibt eine recovery orientierte psychiatrische

Der Dimension Welt in der ein ganzheitliches Assessment erfolgt und der Dimension der Anderen deren Hauptaugenmerk auf Gruppenarbeit liegt. Die praktische Umsetzung und wissenschaftliche Verordnung des Gezeiten Modells schließen sich im letzten Teil an. Neu in der 2.
