the question what kind of creativity is expected from the new cohorts of students future makers of knowledge once the current social re organization of higher education systems becomes fully established To address these questions the international interdisciplinary cast of authors in this volume provides a multitude of possible scenarios for future development of the systems of higher education This book on Sustainable Futures of Higher Education captures the current trends and perspectives of the Knowledge Makers from various nations of the world on meeting and greeting the challenges of globalization and the pressures of the knowledge economy It makes a strong case for universities of tomorrow sustaining their autonomous thinking and yet nurturing an environment of collaborative partnership with society corporate and industry to fuel innovations in plenty and continuous supply of new science and technologies Higher Education has been and shall remain a powerful vehicle of national and global transformation I see a great value of the publication in impacting the minds of the leaders in higher education around the globe for revitalizing the universities Professor P B Sharma President of Association of Indian Universities AIU How should the higher education system be in the globalization era In this book Jaan Valsiner and his colleagues analyze criticize the existing and propose a new higher education system When we say higher education three different layers are supposed to be there the lower the middle and the higher The latter has the function of production of new knowledges Without new knowledge our societies are never improving Authors warn commercialized systems such as the Bologna system overestimate the homogeneity of education Universities without Borders would guarantee both diversity and innovation in the higher education systems Professor Tatsuya Sato Dean of Research Ritsumeikan University *Building, Defending, and Regulating the Self* Abraham Tesser, Joanne V. Wood, Diederik A. Stapel, 2005-07-05 This volume pulls together research on several aspects of the self One set of chapters deals with the importance of building a self based on authenticity and Who I really am a second group deals with the ways in which we defend views of the self as positive and powerful a third group is concerned with multiple aspects of self regulation Each of the chapters is a well written non technical description of an important currently active research program *Gaining Control* Robert Aunger, Valerie Curtis, 2015-03-26 Gaining control tells the story of how human behavioral capacities evolved from those of other animal species Exploring what is known about the psychological capacities of other groups of animals the authors reconstruct a fascinating history of our own mental evolution In the book the authors see mental evolution as a series of steps in which new mechanisms for controlling behavior develop in different species starting with early representatives of this kingdom and leading to a species us that can engage in a large number of different types of behavioral control Key to their argument is the idea that each of these steps from reflexes to instincts drives emotions and cognitive planning can be seen as a novel type of psychological adaptation in which information is inherited by an animal from its own behavior through new forms of learning a form of major evolutionary transition Thus the mechanisms that result from these steps in increasingly complex behavioral control can also be seen as the fundamental building blocks of psychology Such a

perspective on behaviour has a number of implications for practitioners in fields ranging from experimental psychology to public health Short provocative and insightful this book will be of great interest and use to evolutionary psychologists and biologists anthropologists and the scientific community as a whole
