Hydropower Development In The Mekong Region Political Socio Economic And Environmental Perspectives Earthscan Studies In Water Resource Management:

Hydropower Development in the Mekong Region Nathaniel Matthews, Kim Geheb, 2014-11-13 The Mekong Basin is home to some 70 million people for whom this great river is a source of livelihoods the basis for their ecosystems and a foundation of their economies But the Mekong is also currently undergoing enormous social economic and ecological change of which hydropower development is a significant driver This book provides a basin wide analysis of political socio economic and environmental perspectives of hydropower development in the Mekong Basin It includes chapters from China Thailand Laos Cambodia and Vietnam Written by regional experts from some of the region s leading research institutions the book provides an holistic analysis of the shifting socio political contexts within which hydropower is framed legitimised and executed Drawing heavily on political ecologies and political economics to examine the economic social political and ecological drivers of hydropower the book s basin wide approach illuminates how hydropower development and its benefits and impacts are linked multilaterally across the basin The research in the book is derived from empirical research conducted from 2012 2013 as part of the CGIAR Challenge Program on Water and Food s Mekong programme

The Mekong: A Socio-legal Approach to River Basin Development Ben Boer, Philip Hirsch, Fleur Johns, Ben Saul, Natalia Scurrah, 2015-12-22 An international river basin is an ecological system an economic thoroughfare a geographical area a font of life and livelihoods a geopolitical network and often a cultural icon It is also a socio legal phenomenon This book is the first detailed study of an international river basin from a socio legal perspective The Mekong River Basin which sustains approximately 70 million people across Cambodia China Laos Myanmar Thailand and Vietnam provides a prime example of the socio legal complexities of governing a transboundary river and its tributaries The book applies its socio legal analysis to bring a fresh approach to understanding conflicts surrounding water governance in the Mekong River Basin The authors describe the wide range of uses being made of legal doctrine and legal argument in ongoing disputes surrounding hydropower development in the Basin putting to rest lingering caricatures of a single ASEAN way of navigating conflict They call into question some of the common assumptions concerning the relationship between law and development The book also sheds light on important questions concerning the global hybridization or crossover of public and private power and its ramifications for water governance With current debates and looming conflicts over water governance globally and over shared rivers in particular these issues could not be more pressing

The Political Economy of Clean Energy Transitions Douglas Arent, Channing Arndt, Mackay Miller, Finn Tarp, Owen Zinaman, 2017 A volume on the political economy of clean energy transition in developed and developing regions with a focus on the issues that different countries face as they transition from fossil fuels to lower carbon technologies

Water and Power Mart A. Stewart, Peter A. Coclanis, 2018-12-12 This book brings together a talented international group of scholars policy practitioners and NGO professionals that explores a range of issues relating to

environmental developmental and governing challenges on the Mekong one of the world's greatest rivers and alas one of the most endangered. The book is divided into three sections devoted in turn to historical perspectives on the Lower Mekong Basin. Issues relate to livelihood strategies, environmental threats and adaptation strategies and various aspects of river governance with individual authors treating questions of governance at different levels of refraction and in different registers. The result is a fresh and innovative collection of essays which taken together provide much needed new perspectives on some of the most important and seemingly intractable environmental and development issues in contemporary Asia.

Transboundary Water Management and the Climate Change Debate Anton Earle, Ana Elisa Cascao, Stina Hansson, Anders Jägerskog, Ashok Swain, Joakim Öjendal, 2015-05-26. Climate change has an impact on the ability of transboundary water management institutions to deliver on their respective mandates. The starting point for this book is that actors within transboundary water management institutions develop responses to the climate change debate as distinct from the physical phenomenon of climate change. Actors respond to this debate broadly in three distinct ways: adapt, resist, as in avoiding the issue and subvert, as in using the debate to fulfil their own agenda. The book charts approaches which have been taken over the past two decades to promote more effective water management institutions covering issues of conflict, cooperation, power and law. A new framework for a better understanding of the interaction between transboundary water management, institutional resilience and global change is developed through analysis of the way these institutions respond to the climate change debate. This framework is applied to six river case studies from Africa, Asia and the Middle East: Ganges, Brahmaputra, Jordan, Mekong, Niger, Nile, Orange, Senqu, from which learning conclusions and policy recommendations are developed.

Transboundary Water Politics in the Developing World Naho Mirumachi, 2015-03-05. This book examines the political economy that governs the management of international transboundary river basins in the developing world. These shared rivers are the setting for irrigation, hydropower and flood management projects as well as water transfer schemes. Often these projects attempt to engineer the river basin with deep political, socio-economic and environmental implications. The politics of transboundary river basin management sheds light on the challenges concerning sustainable development, water allocation and utilization between sovereign states. Advancing conceptual thinking beyond simplistic analyses of river basins in conflict or cooperation, the author proposes a new analytical framework. The Transboundary Waters Interaction NexuS TWINS examines the coexistence of conflict and cooperation in riparian interaction. This framework highlights the importance of power relations between basin states that determine negotiation processes and institutions of water resources management. The analysis illustrates the way river basin management is framed by powerful elite decision makers combined with geopolitical factors and geographical imaginations. In addition, the book explains how national development strategies and water resources demands have a significant role in shaping the intensities of conflict and cooperation at the international level. The book draws on detailed case studies from the Ganges River basin in South Asia, the Orange-Senqu River basin in

Southern Africa and the Mekong River basin in Southeast Asia providing key insights on equity and power asymmetry applicable to other basins in the developing world

Modern Global Economic System: Evolutional Development vs. Revolutionary Leap Elena G. Popkova, Bruno S. Sergi, 2021-03-16 This proceedings book reflects the alternative way of development of the modern global economic system. It sets evolutionary development in opposition to revolutionary leap. The search for the best way to develop the world economy in the present and future is carried out. The social environment and the human centered development of the modern global economic system have been explored. The features of training of personnel for the modern global economic system through the development of vocational education and training have been studied. Sustainable development energy and food security have been identified as significant milestones of the progress of the modern global economic system. Innovations and digital technologies have been suggested as the drivers of growth and development of the modern global economic system. Consideration has been given to the institutional framework and legal groundwork for the development of the modern global economic system. The fundamentals have been identified and recommendations have been put forward for improving governmental regulation financial and capital investment support for integration in the modern global economic system. Routledge Handbook of the Environment in Southeast Asia Philip Hirsch, 2016-09-13 The environment is one of the defining issues of our times and it is closely linked to questions and dilemmas surrounding economic development. Southeast Asia is one of the world's most economically and demographically dynamic regions and it is also one in which a host of environmental issues raise themselves. The Routledge Handbook of the Environment in Southeast Asia is a collection of 30 chapters dealing with the most significant scholarly debates in this rapidly growing field of study. Structured in four main parts it gives a comprehensive regional overview of and insight into the environment in Southeast Asia. Wide ranging and

balanced this handbook promotes scholarly understanding of how environmental issues are dealt with from diverse theoretical perspectives. It offers a detailed empirical understanding of the myriad environmental problems and challenges faced in Southeast Asia. This is the first publication of its kind in this field, a helpful companion for a global audience and for scholars of Southeast Asian studies from a variety of disciplines.

Catchment and River Basin Management Laurence Smith, Keith Porter, Kevin Hiscock, Mary Jane Porter, David Benson, 2015-04-17. The central focus of this volume is a critical comparative analysis of the key drivers for water resource management and the provision of clean water governance systems and institutional and legal arrangements. The authors present a systematic analysis of case study river systems drawn from Australia, Denmark, Germany, the Netherlands, UK, and USA to provide an integrated global assessment of the scale and key features of catchment management. A key premise explored is that despite the diversity of jurisdictions and catchments, there are commonalities to a successful approach. The authors show that environmental and public health water quality criteria must be integrated with the economic and social goals of those affected, necessitating a twin track and holistic cross sector and discipline approach of stakeholder engagement and sound scientific research. A final synthesis presents a set of principles for adaptive catchment management. These principles demonstrate how to integrate the best scientific and technical knowledge with policy governance and legal provisions. It is shown how decision making and implementation at the appropriate geographic and governmental scales can resolve conflicts and share best sustainable practices.

Water, Power and Identity Rutgerd Boelens, 2015-04-10. This book addresses two major issues in natural resource management and political ecology: the complex conflicting relationship between communities managing water on the ground and national/global policy making institutions and elites; and how grassroots defend against encroachment, question the self-evidence of State market based water governance, and confront coercive and participatory boundary policing, normal vs abnormal. The book examines grassroots building of multi-layered water rights territories and State market and expert networks, vigorous efforts to reshape these water societies in their own image, seizing resources and/or aligning users' identities and rights systems within dominant frameworks. Distributive and cultural politics entwine. It is shown that attempts to modernize and normalize users through universalized water culture, rational water use, and de-politicized interventions deepen water security problems rather than alleviating them. However, social struggles negotiate and enforce water rights. User collectives challenge imposed water rights and identities, constructing new ones to strategically acquire water control, autonomy, and re-moralize their waterscapes. The author shows that battles for material control include the right to culturally define and politically organize water rights and territories. Andean illustrations from Peru, Ecuador, Bolivia, and Chile, from peasant indigenous life stories to international policy making, highlight open and subsurface hydro-social networks. They reveal how water justice struggles are political projects against indifference and that engaging in re-distributive policies and defying truth politics extends context, particular water rights definitions, and governance forms.

International Water Law and

the Quest for Common Security Bjorn-Oliver Magsig, 2015-03-24 The world's freshwater supplies are increasingly threatened by rapidly increasing demand and the impacts of global climate change but current approaches to transboundary water management are unsustainable and may threaten future global stability and international security The absence of law in attempts to address this issue highlights the necessity for further understanding from the legal perspective This book provides a fresh conceptualisation of water security developing an operational methodology for identifying the four core elements of water security which must be addressed by international law availability access adaptability and ambit The analysis of the legal framework of transboundary freshwater management based on this contemporary understanding of water security reveals the challenges and shortcomings of the current legal regime In order to address these shortcomings the present mindset of prevailing rigidity and state centrism is challenged by examining how international legal instruments could be crafted to advance a more flexible and common approach towards transboundary water interaction The concept of considering water security as a matter of regional common concern is introduced to help international law play a more prominent role in addressing the challenges of global water insecurity Ways for implementing such an approach are proposed and analysed by looking at international hydropolitics in Himalayan Asia The book analyses transboundary water interaction as a case study for advancing public international law in order to fulfil its responsibility of promoting international peace and security

Water and Cities in Latin America Ismael Aguilar-Barajas, Jürgen Mahlknecht, Jonathan Kaledin, Marianne Kjellén, Abel Mejía-Betancourt, 2015-05-08 Approximately 80 per cent of the population of Latin America is concentrated in urban centres Pressure on water resources and water management in cities therefore provide major challenges Despite the importance of the issues there has been little systematic coverage of the topic in book form This work fills a gap in the literature by providing both thematic overviews and case study chapters It reviews key aspects of why water matters in cities and presents case studies on topics such as groundwater management green growth and water services inequalities in water supply the financing of water services and flood management Detailed examples are described from Argentina Brazil Colombia Ecuador Mexico and Peru and there is also a chapter comparing lessons which might be learnt from US cities Contributing authors are drawn from both within and outside the region including from the Inter American Development Bank OECD and World Bank to set the issues in a global context

Trans-jurisdictional Water Law and Governance Janice Gray, Cameron Holley, Rosemary Rayfuse, 2016-06-23 Governance of global water resources presents one of the most confounding challenges in contemporary natural resource governance With considerable government citizen and financial donor attention devoted to a range of international transnational and domestic laws and policies aimed at protecting managing and sustainably using fresh and coastal marine water resources this book proposes that sustainable water outcomes require a trans jurisdictional approach to water governance Focusing on the concept of trans jurisdictional water governance the book diagnoses barriers and identifies pathways to coherent and coordinated institutional arrangements

between and across different bodies of laws at local national regional and international levels It includes case studies from the European Union Australia New Zealand South Africa the United States and Southeast Asia Leading specialists offer insights into the pretence and the promise of trans jurisdictional water governance and provide readers including students practitioners policy makers and academics with a basis for better analysing articulating and synthesising standards of good trans jurisdictional water governance both in theory and in practice *From Mekong Commons to Mekong Community*
