Geological and Geostatistical Aquifer Characterization of Wajid Sandstone, Saudi Arabia Osman Abdullatif, Mohammad Makkawi, Mohamed Yassin, 2022-11-26 The book summarizes research work on the Wajid Sandstone which provides integrated field and laboratory data to enable a detailed description of this unit including a facies analysis porosity data as well as permeability data to establish aquifer models Detailed facies analysis at outcrop scale are supported by vertical and lateral sedimentological sections facies and environmental analysis and supplemented by detailed laboratory petrographical and petrophysical data The analysis and interpretation of the outcrop analog models include the reconstruction of the stratigraphic architecture at outcrop scale Moreover the results were described statistically analyzed and eventually establish an outcrop based aquifer model analogue The book benefits undergraduate graduate and researchers working on applied sedimentological studies hydrogeology statistical and geostatistical analysis and modeling **Carbonate**

Reservoirs: Applying Current Knowledge to Future Energy Needs J. Garland, A.J. Barnett, T.P. Burchette, V.P. Wright, 2025-05-07 More than a century of exploitation of carbonate petroleum reservoirs has placed the geoscience subsurface community in a strong position to supply a wealth of knowledge and technology to our future energy needs This Special Publication presents the latest research from carbonate oil and gas fields and demonstrates how the skills and

workflows learnt in this industry can be directly applied to geothermal and radioactive waste disposal evaluations in carbonate successions A common theme running through the volume is the importance of recognizing high permeability zones which can have an enormous impact on producibility whether in oil gas or geothermal reservoirs As we transition to alternative energy sources this Special Publication looks back on the positive contributions of the oil and gas industry to our scientific knowledge and understanding and discusses the ways in which carbonate and associated evaporite successions will play a critical role in our future energy needs

New Frontiers in Tectonic Research Uri Schattner,2011-08-09 Ocean closure involves a variety of converging tectonic processes that reshape shrinking basins their adjacent margins and the entire earth underneath Following continental breakup margin formation and sediment accumulation tectonics normally relaxes and the margins become passive for millions of years However when final convergence is at the gate the passive days of any ocean and its margins are over or soon will be The fate of the Mediterranean and Persian Gulf is seemingly known beforehand as they are nestled in the midst of Africa Arabia plate convergence with Eurasia Over millions of years through the Cenozoic era they progressively shriveled leaving only a glimpse of the Tethys Ocean Eventually the basins will adhere to the Alpine Himalaya orogen and dissipate This book focuses on a unique stage in the ocean closure process when significant convergence already induced major deformations yet the inter plate basins and margins still record the geological history

Lithosphere Dynamics and Sedimentary Basins of the Arabian Plate and Surrounding Areas François Roure, Ammar A. Amin, Sami Khomsi, Mansour A. M. Al Garni,2016-11-21 This book focuses on the links between deep earth mantle and shallow processes in areas of active tectonics in the Arabian Plate and Surrounding Areas It also provides key information for energy resources in these areas The book is a compilation of selected papers from the Task Force of the International Lithosphere Program ILP It comprises a set of research studies from the Middle East North Africa and the Mediterranean domain focusing on 1 the architecture geodynamic evolution and modelling of the Red Sea rift system and its surroundings and tectonics and sedimentation in the Gulf of Corinth 2 the crustal architecture and georesources of the North Algerian Offshore 3 Reservoirs aquifers and fluid transfers in Saudi Basins Petroleum systems and salt tectonics in Yemen and 4 Cretaceous Eocene foreland inversions in Saudi Arabia

Arabian Deserts H. Stewart Edgell,2006-07-21 This is the first comprehensive survey of all the deserts of Arabia based largely on the author's 50 years of experience there The text deals with every kind of desert in the region from vast sand seas to clay pans and stony plains to volcanic flows Along with dune types unique to the region the author outlines climatic changes current ecology and human influence on desertification

Petroleum Geology of the Persian Gulf Fereydoon Ghazban,2009 [Geology, Tectonics and Natural Resources of Arabia and its Surroundings](#) A. Scharf, M. Al-Kindi, A. Racey,2025-09-14 The Arabian Plate displays a well preserved almost continuous geological record of the last one billion years of Earth's history and consequently provides a natural laboratory for the study of a wide variety of geological processes The region is also endowed with major hydrocarbon and mineral resources

of global importance An understanding of the geology and tectonics across the region is essential for the future exploration and production of these resources and for investigating the geological options for carbon capture and storage in the region which has a significant role to play in the energy transition This volume provides significant new data on the geology tectonics and natural resources of the Arabian Plate and its surroundings A diverse range of papers is presented offering new data ideas and review articles on the geology and tectonics of Arabia and adjacent areas covering the Neoproterozoic to present day Transboundary Water Resources in Afghanistan John F. Shroder, Sher Jan Ahmadzai, 2016-06-13

Transboundary Water from Afghanistan Climate Change and Land Use Implications brings together diverse factual material on the physical geography and political cultural and economic implications of Southwest Asian transboundary water resources It is the outgrowth of long term deep knowledge and experience gained by the authors as well as the material developed from a series of new workshops funded by the Lounsbery Foundation and other granting agencies Afghanistan and Pakistan have high altitude mountains providing vital water supplies that are highly contentious necessities much threatened by climate change human land use variation and political manipulation which can be managed in new ways that are in need of comprehensive discussions and negotiations between all the riparian nations of the Indus watershed Afghanistan China India and Pakistan This book provides a description of the basic topographic configuration of the Kabul River tributary to the Indus river together with all its tributaries that flow back and forth across the border between Afghanistan and Pakistan and the basic elements that are involved with the hydrological cycle and its derivatives in the high mountains of the Hindu Kush and Himalaya Synthesizes information on the physical geography and political cultural and economic implications of Southwest Asian transboundary water resources Offers a basic topographic description of the Indus River watershed Provides local water management information not easily available for remote and contentious border areas Delivers access to the newest thinking from chief personnel on both sides of the contentious border Features material developed from a series of new workshops funded by the Lounsbery Foundation and other granting agencies Geological Setting,

Palaeoenvironment and Archaeology of the Red Sea Najeeb M.A. Rasul, Ian C.F. Sedimentary Basins and Petroleum Geology of the Middle East A.E.M. Nairn, A.S. Alsharhan, 1997-12-11 The wealth of petroleum has made the Middle East one of the most actively explored regions of the world The volume of geological geophysical and geochemical data collected by the petroleum industry in recent decades is enormous The Middle East may be a unique region in the world where the volume of subsurface data and information exceeds that based on surface outcrop This book reviews the tectonic and geological history of the Middle East and the regional hydrocarbon potential on a country by country basis in the context of current ideas developed through

seismic and sequence stratigraphy and incorporating the ideas of global sea level change Subsurface data have been used as much as possible to amplify the descriptions The paleogeographic approach provides a means to view the area as a whole While the country by country approach inevitably leads to some repetition it enhances the value of the volume as a teaching tool and underlines some of the changing lithologies within formations carrying the same name **Salt Tectonics** G.
