

Basic Principles of Landscape Design¹

Dewayne L. Ingram²

Landscaping combines elements of art and science to create a functional, aesthetically pleasing extension of indoor living to the outdoors. One initial purpose of landscape design is to blend man's technology (house or building) into the natural surroundings. To work toward a desirable landscape design, the landscape horticulturist must have a working knowledge of art elements and design principles. This publication is intended for the commercial landscaper with little or no training in the use of these basic principles. This publication is not a complete landscape design text.

ELEMENTS OF ART

Elements of art include but are not limited to color, line, form, texture and scale. These elements are never independent of each other, but we will discuss their individual natures before considering the interactions.

Color variation can best be explained by use of a color wheel (Figure 1). Primary colors are red, blue and yellow. Orange, green and violet are called secondary colors because they are combinations of two primary colors. For example, yellow and red are combined to yield orange. Tertiary colors are the

fusion of one primary and one secondary color. These colors would be between primary and secondary colors.

Figure 1.

Tint refers to a light value and is accomplished by adding white to the pure color on the color wheel, while shade is a dark value and is created by adding black to the pure color on the color wheel. Black, white and grey are neutrals and are compatible with any color. Light colors and tints tend to attract attention as do bright, vivid colors.

Colors are combined into color schemes for practical applications. Three basic color schemes are monochromatic, analogous and complementary. A monochromatic color scheme consists of different tints and shades of one color and is seldom achieved
