50 Popular Beliefs That People Think Are True Guy P. Harrison, 2012-01-03 What would it take to create a world in which fantasy is not confused for fact and public policy is based on objective reality asks Neil deGrasse Tyson science popularizer and author of *Astrophysics for People in a Hurry* I don't know for sure But a good place to start would be for everyone on earth to read this book Maybe you know someone who swears by the reliability of psychics or who is in regular contact with angels Or perhaps you're trying to find a nice way of dissuading someone from wasting money on a homeopathy cure Or you met someone at a party who insisted the Holocaust never happened or that no one ever walked on the moon How do you find a gently persuasive way of steering people away from unfounded beliefs bogus cures conspiracy theories and the like This down to earth entertaining exploration of commonly held extraordinary claims will help you set the record straight The author a veteran journalist has not only surveyed a vast body of literature but has also interviewed leading scientists explored the most haunted house in America frolicked in the inviting waters of the Bermuda Triangle and even talked to a contrite Roswell alien He is not out simply to debunk unfounded beliefs Wherever possible he presents alternative scientific explanations which in most cases are even more fascinating than the wildest speculation For example stories about UFOs and alien abductions lack good evidence but science gives us plenty of reasons to keep exploring outer space for evidence that life exists elsewhere in the vast universe The proof for Bigfoot or the Loch Ness Monster may be nonexistent but scientists are regularly discovering new species some of which are truly stranger than fiction Stressing the excitement of scientific discovery and the legitimate mysteries and wonder inherent in reality this book invites readers to share the joys of rational thinking and the skeptical approach to evaluating our extraordinary world

Essential Irrationality M. A. ALAM, Irrationalities in our behaviours have been observed to be essential aspects of our nature Most of the irrationalities have their origin in the adaptive strategies developed by millions of years of evolution to cope with the environmental harsh conditions of our ancient past Consequently we developed quick response systems to meet successfully the challenges of our ancestral environment They were essential for our survival but a few have now become redundant in the modern conditions and are looked down as ridiculous biases Some irrationalities have actually been found to be essential and beneficial for the well being and growth of our species During the last few thousand years of our development we additionally acquired a large number of belief systems superstitions and faiths Some of these beliefs are not quite rational and reasonable They mould our personality by affecting our opinions decisions actions and behaviours We are what we believe When you hold beliefs without ascertaining their validity you start losing your ability to doubt and question your beliefs Fortunately along with these developments we also created a reservoir of verifiable knowledge by using rational methods during the last few hundred years of our existence We have a responsibility to familiarise ourselves with these techniques to avoid pitfalls of assuming all beliefs to be true This book discusses how these irrationalities affect our lives and how to cope with them

The Psychology and Science of Pseudoscience Terence Hines, 2025-03-18 This book provides a comprehensive review of numerous areas of pseudoscience and related pathological science. It not only describes the factual bases for rejecting pseudoscientific claims but also emphasizes the psychological processes that lead to the acceptance of such claims. This book is timely given the increase in misinformation over the past decade. Using three principles of cognitive psychology, this book helps explain why people are hard-wired to accept and continue to believe in pseudoscientific claims. It provides up-to-date discussions of numerous paranormal and pseudoscientific topics, including the usual suspects: UFOs and alien abductions, astrology, cryptozoology, and more. But it also covers belief in conspiracy theories, laboratory parapsychology, bogus forensic science techniques, the pseudopsychologies of Freud, medical fraud, and the unethical practices of Big Pharma. Older research that was foundational in the critical examination of several topics is woven throughout to situate them in a historical context.
