Bakris, 2012-07-10 Chronic Kidney Disease (CKD) is a recognized risk factor for cardiovascular events and death. The coexistence of CKD and heart failure is increasing in prevalence worldwide and requires a unique and subtle approach to patient management. *The Kidney in Heart Failure* focuses on the changes that occur in kidney physiology as a function of a failing heart. This comprehensive resource covers epidemiology, pathophysiology, management of kidney disorders and advances in nephropathy management. In addition, the latest therapies, common heart failure dilemmas and kidney disease markers are included. Each chapter is co-authored by a Nephrologist and Cardiologist, offering a unified perspective to these chronic conditions. This indispensable volume provides the reader with the depth of knowledge needed for assessing and treating the cardio-renal patient. Neurorehabilitation Editor's Pick 2021 Giorgio Sandrini, Thomas Platz, Ross D. Zafonte, 2021-08-19 **Climate Change and Groundwater** Walter Dragoni, Balbir S. Sukhija, 2008 There is a general consensus that for the next few decades at least the Earth will continue its warming. This will inevitably bring about serious environmental problems. For human society the most severe will be those related to alterations of the hydrological cycle which is already heavily influenced by human activities. Climate change will directly affect groundwater recharge, groundwater quality and the freshwater-seawater interface. The variations of groundwater storage inevitably entail a variety of geomorphological and engineering effects. In the areas where water resources are likely to diminish, groundwater will be one of the main solutions to prevent drought. In spite of its paramount importance, the issue of Climate Change and Groundwater has been neglected. This volume presents some of the current understanding of the topic. **Waste Management and Environmental Impact XI** J.J. Casares, M. Lega, E. Rada, 2022-08-10 Resulting from a merger of two successful events, this book contains papers presented at the 11th International Conference on Waste Management and Environmental and Economic Impact on Sustainable Development. To prevent emerging threats to environmental and ecological systems, we must learn from past failures to avoid repeating similar mistakes. Waste management is one of the key problems of modern society due to the ever-expanding volume and complexity of discarded domestic and industrial waste and its implications on health and the environment. Society is increasingly aware of the need to establish better practices and safer solutions for waste disposal. This

creates a need for more research on current disposal methods such as landfills incineration chemical and effluent treatment as well as recycling clean technologies waste monitoring public and corporate awareness and general education The desired direction of waste management is towards sustainable strategies that avoid the short term solutions applied in the past The approach which has emerged as the most promising has been called 4Rs where reduction reuse recycling and recovery are seen as the best actions More recently these concepts have given rise to the new model of the Circular Economy which is based on the reuse of what up to now has been considered waste reintroducing them into the production cycle Further steps are required towards the improvement of current technologies increased collaboration between the public government and private sectors and increased involvement of all stakeholders The included research works put a focus on the impact of economic constraints on the environment taking into account the social aspects as well as the over use of natural resources contamination and toxicity Problems of great importance are addressed with the goal of finding constructive and progressive approaches to ensure sustainability
