Clive Lee, Peter Niederer, 2010 Developments in bioengineering and medical technology have led to spectacular progress in clinical medicine As a result increased numbers of courses are available in the area of bioengineering and clinical technology These often include modules dealing with basic biological and medical sciences aimed at those taking up these studies who have a background in engineering To date relatively few participants from medicine have taken up courses in biomedical engineering to the detriment of scientific exchange between engineers and medics The European Society for Engineering and Medicine ESEM aims to bridge the gap between engineering and medicine and biology It promotes cultural and scientific exchanges between the engineering and the medical biological fields This primer consists of a series of First Step chapters in engineering and is principally presented for those with a medical or biology background who intend to start a MSc programme in biomedical engineering and for medics or biologists who wish to better understand a particular technology It will also serve as a reference for biomedical engineers Written by engineers and medics who are leaders in their field it covers the basic engineering principles underpinning biomechanics bioelectronics medical informatics biomaterials tissue engineering bioimaging and rehabilitation engineering It also includes clinically relevant examples
