

## **Bilge Pump**

The electric bilge pump supplied with your Bayliner is of an impeller type. If you see water and the pump motor is running but not pumping, check to see that it is not clogged by debris. If it still does not pump, check the discharge hose for kinks or a collapsed area.

**NOTE: The federal water pollution control act prohibits the discharge of oil or oil waste into or upon the navigable waters and contiguous zone of the United States if such discharge causes a film or sheen upon, or discoloration of, the surface of the water, or causes a sludge or emulsion beneath the surface of the water. Violators are subject to penalty of \$5000.**

## **Running Lights**

If failure occurs, check the following:

1. You may have blown a fuse. (Replace fuse in switch panel.)
2. The bulb may be burned out. (Carry spare bulbs for replacement.)
3. The bulb base may be corroded. (Clean periodically as required and coat with non-conductive grease or vaseline.)
4. A wire may be loose due to vibration or mis-stowed gear. (Repair where break occurred.) **NOTE: Prolonged operation of cabin interior lights (overnight) will result in a dead battery. Be conservative in the use of battery power.**

## **Windshield Wiper**

The wiper motor supplied with your Bayliner, like all good equipment, requires some maintenance. Do not increase the size of the wiper arm. The manufacturer has engineered the motor for that exact load. If the wiper does not operate: 1) Check the fuse, 2) Check the switch, and 3) Make sure wiper arm is securely attached to motor.

## **Head Operation**

### **MARINE HEAD WITH HOLDING TANK (OPTIONAL)**

The marine head with holding tank is designed so waste may be flushed into the holding tank or, for those traveling offshore and beyond Federally regulated waterways, flushed overboard. This is accomplished by routing the head discharge hose through a "Y" connector to the holding tank and also overboard. There are valves in each of these lines. To flush waste overboard the gate valve to the tank must be closed and the thru-hull seacock should be open. To flush into the holding tank, close the through-hull seacock and open the gate valve to the holding tank. To empty the holding tank the boat must be taken to a pump out station.
