Beautiful Visualization Julia S. Steele, Noah P. N. Iliinsky, 2010 Visualization is the graphic presentation of data portrayals meant to reveal complex information at a glance

Think of the familiar map of the New York City subway system or a diagram of the human brain. Successful visualizations are beautiful not only for their aesthetic design but also for elegant layers of detail that efficiently generate insight and new understanding. This book examines the methods of two dozen visualization experts who approach their projects from a variety of perspectives as artists, designers, commentators, scientists, analysts, statisticians, and more. Together they demonstrate how visualization can help us make sense of the world. Provided by publisher: *Mastering Gephi Network Visualization* Ken Cherven, 2015-01-28. This book is intended for anyone interested in advanced network analysis. If you wish to master the skills of analyzing and presenting network graphs effectively, then this is the book for you. No coding experience is required to use this book, although some familiarity with the Gephi user interface will be helpful. *More Technology for the Rest of Us* Nancy D. Courtney, 2010-02-26. In this valuable book, 11 chapters each overview a technology of interest to librarians working in the field today. From cloud computing to data curation to open source software, the world of technology offers great opportunity and potential frustration. Nancy Courtney and her team of IT experts have set out to enhance the former and alleviate the latter. *More Technology for the Rest of Us: A Second Primer on Computing for the Non-IT Librarian* follows up on Courtney's 2005 technology volume by tackling the most recent advances in IT. Each chapter describes a technology important to the library field, explains how it works in terms a non-IT professional can understand, and describes its uses. The essays in *More Technology for the Rest of Us* are not meant to make readers experts but to provide a basic introduction to some of the current technologies impacting libraries and their patrons. Articles are brief and clearly written, and computer jargon is defined and explained. Each chapter lists references for further information, and there is a selected bibliography and glossary at the end of the book. *Interactive Storytelling* Alex Mitchell, Mirjam Vosmeer, 2021-12-03. This book constitutes the refereed proceedings of the 14th International Conference on Interactive Digital Storytelling (ICIDS 2021) held in Tallinn, Estonia, in December 2021. The 18 full papers and 17 short papers presented together with 17 posters and demos were carefully reviewed and selected from 99 submissions. The papers are categorized into the following topical sub-headings: Narrative Systems, Interactive Narrative Theory, Interactive Narrative Impact and Application, and the Interactive Narrative Research Discipline and Contemporary Practice. *Visualization of Time-Oriented Data* Wolfgang Aigner, Silvia Miksch, Heidrun Schumann, Christian Tominski, 2023-12-21. This is an open access book. Time is an exceptional dimension with high relevance in medicine, engineering, business, science, biography, history, planning, or project management. Understanding time-oriented data via visual representations enables us to learn from the past in order to predict, plan, and build the future. This second edition builds upon the great success of the first edition. It maintains a brief introduction to visualization and a review of historical time-oriented visual representations. At its core, the book develops a systematic view of the visualization of time-oriented data. Separate chapters discuss interaction techniques and computational methods for supporting the visual data analysis. Many examples and figures illustrate the introduced concepts and techniques. So what is new for the second
