**Spectroscopy** Jaan Laane,2011-08-11 Much of what we know about atoms molecules and the nature of matter has been obtained using spectroscopy over the last one hundred years or so In this book we have collected together twenty chapters by eminent scientists from around the world to describe their work at the cutting edge of molecular spectroscopy These chapters describe new methodology and applications instrumental developments and theory which is taking spectroscopy into new frontiers The range of topics is broad Lasers are utilized in much of the research but their applications range from sub femtosecond spectroscopy to the study of viruses and also to the investigation of art and archeological artifacts Three chapters discuss work on biological systems and three others represent laser physics The recent advances in cavity ringdown spectroscopy CRDS surface enhanced Raman spectroscopy SERS two dimensional correlation spectroscopy 2D COS and microwave techniques are all covered Chapters on electronic excited states molecular dynamics symmetry applications and neutron scattering are also included and demonstrate the wide utility of spectroscopic techniques Provides comprehensive coverage of present spectroscopic investigations Features 20 chapters written by leading researchers in the field Covers the important role of molecular spectroscopy in research concerned with chemistry physics and biology **Evaluation of CTCLS Series Traffic Signal Load Switches in the Field** Helmut T. Zwahlen,2003 The purpose of this study was to evaluate the extended traffic signal light bulb longevity claims made by CLS for their CTCLS series load switches by testing

in the field against conventional load switches in five different states except Minnesota. In each state approximately 144 signalized intersections containing 512 load switches and 3456 bulbs were installed for the study half using CTCLS load switches and half conventional load switches. The states involved were Ohio, Mississippi, the state and the city of Jackson, Michigan, Wisconsin, Minnesota where no load switches or bulbs were installed, and Iowa City of Waterloo. Four different major brands of bulbs were evaluated in the study: GE Real, GE Phillips, Sylvania, and Duro. Each brand was assigned to a particular state; two states used Sylvania bulbs. Intersections used in the study were to be monitored and maintained for two years, and failed bulbs and load switches were tagged and returned to the study subcontractor, The Operator Performance Laboratory at the University of Iowa, for cataloging and analysis periodically during that time. The CLS claim that their CTCLS series load switches extended bulb life and reduced maintenance costs could not be investigated since ODOT decided to remove the CTCLS load switches due to safety and liability concerns after several of the switches gave dual indications or other malfunctions. The study was then modified to study all the bulbs using only conventional load switches, 3456 bulbs per state. In addition, the Duro test company went bankrupt after the test started. Overall, the bulb life portion of the study produced little useful data. In all cases, the states and cities tagged and returned at most a fraction of the failed bulbs. It appears that the extra work caused by the study may have been asking too much of already busy maintenance personnel. Thus, it seems that studies that rely on extra efforts by state personnel over a long period of time are at best difficult to carry out. The two bulb brands, GE Real, Ohio, and Sylvania, Jackson, MS, for which reasonably complete data were made available from internal department records would be unsuitable for use in Ohio, both exceeding the ODOT 2% failure criterion for the first year. A group relamping spreadsheet was created and evaluated using Ohio District 4 as a test case for a limited sensitivity analysis. A relatively easy-to-use Excel spreadsheet was devised to compute the costs of group relamping as a function of relamping interval. The model shows a shallow minimum region at about 10 months, providing a minimized annual cost of
