The book takes a scenario based approach to showing you how to collect data to mine that data through insightful analysis and to draw conclusions that drive business performance. Each chapter in the book is focused on a specific challenge that you will encounter when using PowerPivot. Each chapter takes you through a solution technique that has been proven in the real world. Written by a Microsoft Virtual Technical Specialist VTS for business intelligence. *Pro Entity Framework 4.0* Scott Klein, 2010-04-29 Previously SQL developers have been able to almost entirely ignore the SQLCLR and treat it as a peripheral technology almost an extension to the main product. With the advent of LINQ and the Entity Framework this is no longer the case and the SQLCLR is moving to the center stage. It is a powerful product but for many it is an entirely new way of working with data. *Pro Entity Framework 4.0* will help readers understand the implications of the Entity Framework and how it can be used to change their development practices and make their databases more powerful and flexible. Since many readers will be encountering this subject for the first time the book will create an inclusive environment in which the concepts of .NET development are approached from the perspective of the Relational T-SQL developer to foster a sense of shared ownership in keeping with Microsoft's latest best practices. Comprehensive coverage of the new greater and more challenging integration with .NET 3.5. Written from a real world perspective and examines the features offered by LINQ and the Entity Framework that will help solve problems experienced by professional developers. Contains insight interpretation analysis and evangelism instead of just plain facts. to shift the focus of their learning away from the formalism associated with the university situation towards the exigencies of working life. It is in this sense that the book explores how people move from being expert students to novice professionals. This book presents a model of professional learning fashioned out of a decade of research undertaken in countries half a world away from each other: Sweden and Australia. It uses empirical research gathered from students and teachers to show how students negotiate the forms of professional knowledge they encounter as part of their studies and how they integrate their understandings of a future professional world with professional knowledge and learning.
