Committee, 2012-02-02 Malicious software designed to infect computers to steal bank details and identity information poses a growing threat in the UK as more people use the internet and an increasing proportion of economic activity takes place online The Science and Technology Committee say the Government must do more to help the public understand how to stay safe online It calls for a prolonged awareness raising campaign to increase public understanding of personal online security Eighty per cent of protection against cyber attack is routine IT hygiene yet currently there is no single first point of advice and help for consumers and much of the online information about internet security is often technical or jargon filled Television exposure is crucial to gain the widest possible exposure to the safety message and more should be done to promote and resource the existing Government website Get Safe Online Advice from Get Safe Online should be provided with every device capable of accessing the internet and all Government websites should link to the website and highlight the latest security updates The provision of Government services by the digital by default policy will increasingly require those in receipt of Government benefits and services to access these online The Committee raises concerns that the scheme will be of greater use in protecting the Government against welfare fraud than the individual user against crime The Government should investigate the potential for imposing statutory safety standards if the industry cannot demonstrate that voluntary self regulation can improve security Cybercrime and Digital Deviance Roderick S. Graham, Shawn K. Smith, 2024-04-30 Cybercrime and Digital Deviance Second Edition combines insights from sociology criminology psychology and cybersecurity to explore cybercrimes such as hacking identity theft and romance scams along with forms of digital deviance such as pornography addiction trolling and canceling people for perceived violations of norms Other issues are explored including cybercrime investigations nation state cybercrime the use of algorithms in policing cybervictimization and expanded discussion of the theories used to explain cybercrime Graham and Smith conceptualize the online space as a distinct environment for social interaction framing their work with assumptions informed by their respective work in urban sociology and spatial criminology and offering an engaging entry point for understanding what may appear to be a technologically complex course of study The authors apply a modified version of a typology developed by David Wall cybertrespass cyberfraud cyberviolence and cyberpornography This typology is simple enough for students just beginning their inquiry into cybercrime while its use of legal categories of trespassing fraud violent crimes against persons and moral transgressions provides a solid foundation for deeper study In this edition each chapter includes a new Current Events and Critical Thinking section using concepts from the chapter to explore a specific event or topic like the effect of disinformation on social cohesion and politics Taken together Graham and Smith's application of a digital environment and Wall's cybercrime typology makes this an ideal upper level text for students in sociology and criminal justice It is also an ideal introductory text
