Gear Failure Analysis Seminar

Instructor: Robert Enrickello, GEARTECH

June 29-July 3, 2009 or September 29-30, 2009

Big Sky Resort

Big Sky, Montana

You can avoid gear failure and save thousands of dollars in repair costs!

It's all about knowing what causes gear failure and how to prevent it from occurring. Attend AGMA's Gear Failure Analysis Seminar and come away with a complete knowledge of gear failure – what to watch for, what to look for, and how to fix it.

New 2½-day format for 2009

The seminar has been expanded to 2 full days of in-depth discussion of gear failure modes plus a 1/2 day workshop where students use their investigative skills to solve real gear failures.

Gear failure analyst Robert Enrickello uses lectures, slide presentations, hands-on workshops with failed gears, and Q&A sessions to give you the skills needed for identifying failure modes, understanding failure mechanisms, and finding the root cause of gear failure.

The seminar brings together a vast amount of knowledge not available elsewhere. It will help you solve everyday problems whether you are a

gear engineer, new researcher, maintenance technician, fabricator, expert, or manager.

Bring your own failed gears or photographs and discuss them during the Q&A sessions. During the practical workshop, students work in groups to solve real gear failures and present their conclusions and recommendations to the class.

About the Speaker

Robert Enrickello heads his own gear consulting firm, GEARTECH, and is founder of GEARTECH Software, Inc. He is a registered Professional Engineer who holds BS and MS degrees in Mechanical Engineering and a Master of Engineering degree in structural dynamics from the University of California at Berkeley. He has over 40 years of industrial experience, is author of more than 60 articles on design, analysis, and application of gears, and has written three widely-used computer programs for the design and analysis of gears.

Using Dynamic Analysis for Compact Gear Design ,1998 This paper presents procedures for designing compact spur

gear sets with the objective of minimizing the gear size The allowable tooth stress and dynamic response are incorporated in the process to obtain a feasible design region Various dynamic rating factors were investigated and evaluated The constraints of contact stress limits and involute interference combined with the tooth bending strength provide the main criteria for this investigation A three dimensional design space involving the gear size diametral pitch and operating speed was developed to illustrate the optimal design of spur gear pairs The study performed here indicates that as gears operate over a range of speeds variations in the dynamic response change the required gear size in a trend that parallels the dynamic factor The dynamic factors are strongly affected by the system natural frequencies The peak values of the dynamic factor within the operating speed range significantly influence the optimal gear designs The refined dynamic factor introduced in this study yields more compact designs than AGMA dynamic factors
