

## APA (6<sup>th</sup> edition) Referencing Style

This referencing style sheet is to be used in conjunction with the Library's general Guide to Citing & Referencing. The information is based on the following manual from the American Psychological Association (APA):

American Psychological Association. (2010). *Publication manual of the American Psychological Association* (6th ed.). Washington, DC: Author.

### For help with referencing items not covered in this guide:

You might like to refer to either the *Publication manual of the American Psychological Association* (6th ed.) or the more compact version, *Concise rules of APA style* (6<sup>th</sup> ed.). Both manuals are available in the Library, on Level 3, at shelf mark 808.06615 AME. You can also access the following ebook via the Library Catalogue: [The complete guide to referencing and avoiding plagiarism](#) - this includes examples for APA and other styles.

### Citation

The APA uses an author-date style of referencing with details entered in round brackets, for example:

The traditional approach to human cognition is over-simplified in assuming that processing is typically serial (Eysenck & Keane, 2010).

**Treatment of multiple authors:** when a work has two authors, cite both authors every time. When a work has three, four or five authors, cite all authors the first time a reference occurs. In subsequent citations, include only the surname of the first author followed by et al. See:

Kisangau, Lyanuu, Hosea, and Joseph (2007) found that ... [first time cited]

Kisangau et al. (2007) found that ... [subsequent citations]

When a work has six or more authors, cite only the surname of the first author followed by et al. and the year of publication for the first and subsequent citations.

### Reference list

The reference list should contain full details of all the sources mentioned in your text, arranged alphabetically by surname of first author.

### Reference examples

Below are some examples of the more common types of document you might want to reference. Each gives the APA 6th ed. format for the reference, followed by an example. **Treatment of multiple authors within reference list:** when authors number eight or more, include the first six authors' names then insert three ellipses and add the last author's name. For example:

Kisangau, A., Lyanuu, B., Hosea, C., Joseph, D., Rogers, T., Tylee, C., . . . Humphreys, L. J. (2007). *Psychology*. Birmingham: ABC Press.

**The American Psychiatric Association Publishing Textbook of Psychopharmacology, Sixth Edition** Alan F. Schatzberg, M.D., Charles B. Nemeroff, M.D., Ph.D., 2024-03-22 More than 160 authors, including more than 75 new contributors, lent their expertise to this sixth edition of The American Psychiatric Association Publishing Textbook of Psychopharmacology. Featuring 12 all-new chapters and fully aligned with the revised DSM-5-TR classification, this two-volume text offers an unrivaled in-depth look at the rapidly evolving field of neuropsychopharmacology. The opening chapters provide a whirlwind tour of the multiple disciplines that undergird the chapters to come, with topics extending from the principles of molecular biology and genomics to the rudiments of neuroimaging and personalized medicine in psychiatry. The main body of the Textbook features an examination of the medication classes that form the basis of psychopharmacological treatment. For each drug within a class, data are reviewed on history and discovery, preclinical and clinical pharmacology, pharmacokinetic parameters, mechanism of action, indications and efficacy, side effects, and toxicology, and drug-drug interactions. The Textbook's second volume focuses on psychopharmacological approaches to treatment of patients with major psychiatric disorders, e.g., mood and anxiety disorders, schizophrenia, substance use disorders, as well as patients in specific populations, e.g., adults with ADHD, pediatric patients. For each specific condition, patient population, or setting, chapters provide guidance on topics such as medication selection, combination, and maintenance; dosing regimens; side effect monitoring and management; and optimization of treatment response. Closing this volume is an Appendix of Psychiatric Medications with key information on each of the agents covered in the Textbook, presented in a convenient tabular format. Noteworthy additions to this textbook include chapters addressing the following topics: The potential roles of personalized medicine in psychiatry and of artificial intelligence and machine learning in psychopharmacology; New medications with novel pharmacological mechanisms, including the neurosteroid antidepressant brexanolone and the atypical antipsychotic pimavanserin; Use of investigational agents such as psychedelics in psychiatric treatment; Treatment of alcohol use disorder, PTSD, OCD, and autism spectrum disorder; Treatment of ADHD in adults; Treatment of women in all life phases, including during pregnancy and the postpartum period; Treatment of individuals with intellectual developmental disorder. With a level of detail not found in any other source, this new edition of The American Psychiatric Association Publishing Textbook of Psychopharmacology illuminates the path to effective evidence-based practice.
