

### PROBLEM 2.18

For the stake of Prob. 2.5, knowing that the tension in one rope is 120 N, determine by trigonometry the magnitude and direction of the force  $\mathbf{P}$  so that the resultant is a vertical force of 160 N.

**PROBLEM 2.5** A stake is being pulled out of the ground by means of two ropes as shown. Knowing that  $\alpha = 30^\circ$ , determine by trigonometry (a) the magnitude of the force  $\mathbf{P}$  so that the resultant force exerted on the stake is vertical, (b) the corresponding magnitude of the resultant.

### SOLUTION

Using the laws of cosines and sines:

$$P^2 = (120 \text{ N})^2 + (160 \text{ N})^2 - 2(120 \text{ N})(160 \text{ N})\cos 25^\circ$$

$$P = 72.096 \text{ N}$$

And

$$\frac{\sin \alpha}{120 \text{ N}} = \frac{\sin 25^\circ}{72.096 \text{ N}}$$

$$\sin \alpha = 0.70343$$

$$\alpha = 44.703^\circ$$

$$\mathbf{P} = 72.1 \text{ N} \swarrow 44.7^\circ \blacktriangleleft$$

**Advanced Vibration Analysis** S. Graham Kelly, 2006-12-19 Delineating a comprehensive theory Advanced Vibration

Analysis provides the bedrock for building a general mathematical framework for the analysis of a model of a physical system undergoing vibration. The book illustrates how the physics of a problem is used to develop a more specific framework for the analysis of that problem. The author elucidates a general theory applicable to both discrete and continuous systems and includes proofs of important results especially proofs that are themselves instructive for a thorough understanding of the result. The book begins with a discussion of the physics of dynamic systems comprised of particles, rigid bodies and deformable bodies and the physics and mathematics for the analysis of a system with a single degree of freedom. It develops mathematical models using energy methods and presents the mathematical foundation for the framework. The author illustrates the development and analysis of linear operators used in various problems and the formulation of the differential equations governing the response of a conservative linear system in terms of self adjoint linear operators, the inertia operator and the stiffness operator. The author focuses on the free response of linear conservative systems and the free response of non self adjoint systems. He explores three methods for determining the forced response and approximate methods of solution for continuous systems. The use of the mathematical foundation and the application of the physics to build a framework for the modeling and development of the response is emphasized throughout the book. The presence of the framework becomes more important as the complexity of the system increases. The text builds the foundation, formalizes it and uses it in a consistent fashion including application to contemporary research using linear vibrations.
