Behavioral Mathematics For Game Ai Applied Mathematics:

Behavioral Mathematics for Game AI Dave Mark, 2009 Human behavior is never an exact science making the design and programming of artificial intelligence that seeks to replicate human behavior difficult. Usually the answers cannot be found in sterile algorithms that are often the focus of artificial intelligence programming. However, by analyzing why people behave the way we do, we can break down the process into increasingly smaller components. We can model many of those individual components in the language of logic and mathematics and then reassemble them into larger, more involved decision-making processes. Drawing from classical game theory, Behavioral Mathematics for Game AI covers both the psychological foundations of human decisions and the mathematical modeling techniques that AI designers and programmers can use to replicate them. With examples from both real life and game situations, you'll explore topics such as utility, the fallacy of rational behavior, and the inconsistencies and contradictions that human behavior often exhibits. You'll examine various ways of using statistics, formulas, and algorithms to create believable simulations and to model these dynamic, realistic, and interesting behaviors in video games. Finally, you'll be introduced to a number of tools you can use in conjunction with standard AI algorithms to make it easier to utilize the mathematical models. *Game AI Pro* Steven Rabin, 2013-09-11

Mathematics and Education in an AI Era Dragana Martinovic,Marcel Danesi,2025-04-25 This book focuses on the potential contributions of Artificial Intelligence AI for enhancing mathematics education. It includes rationales for an AI oriented pedagogical model such as interdisciplinarity and even sensitivity to crucial world issues such as climate change. The chapters in this book highlight what the new age of mathematics education entails, concretely covering themes from the utilization of AI directly into classroom pedagogy and the semiotic consequences of what this entails to how mathematics training can be tailored to get students to relate concretely to problems of climate change and to understand the relevance of the differences between symmetry and asymmetry as psychological constructs. The overall picture we can glean from these chapters is not mere eclecticism but an integration of disciplinary perspectives into a holistic framework that has great relevance and resonance for mathematics education in the age of AI.

Statistical Methods for Field and Laboratory Studies in Behavioral Ecology Scott Pardo, Michael Pardo, 2018-03-05 Statistical Methods for Field and Laboratory Studies in Behavioral Ecology focuses on how statistical methods may be used to make sense of behavioral ecology and other data. It presents fundamental concepts in statistical inference and intermediate topics such as multiple least squares regression and ANOVA. The objective is to teach students to recognize situations where various statistical methods should be used, understand the strengths and limitations of the methods, and to show how they are implemented in R code. Examples are based on research described in the literature of behavioral ecology, with data sets and analysis code provided. Features: This intermediate to advanced statistical methods text was written with the behavioral ecologist in mind. Computer programs are provided, written in the R language. Datasets are also provided, mostly based at least to some degree on real studies. Methods and ideas discussed include multiple regression and ANOVA, logistic and Poisson regression, machine learning, and model identification, time to event modeling, time series and stochastic modeling, game theoretic modeling, multivariate methods, study design, sample size, and what to do when things go wrong. It is assumed that the reader has already had exposure to statistics through a first introductory course at least, and also has sufficient knowledge of R. However, some introductory material is included to aid the less initiated reader. Scott Pardo, Ph.D., is an accredited professional statistician (PStat) by the American Statistical Association. Michael Pardo is a Ph.D. candidate in behavioral ecology at Cornell University, specializing in animal communication and social behavior.
