David Whitman, Ronald Terry, 2022-06-01 The authors cover two general topics basic engineering economics and risk analysis  
in this text Within the topic of engineering economics are discussions on the time value of money and interest relationships  
These interest relationships are used to define certain project criteria that are used by engineers and project managers to  
select the best economic choice among several alternatives Projects examined will include both income and service  
producing investments The effects of escalation inflation and taxes on the economic analysis of alternatives are discussed  
Risk analysis incorporates the concepts of probability and statistics in the evaluation of alternatives This allows management  
to determine the probability of success or failure of the project Two types of sensitivity analyses are presented The first is  
referred to as the range approach while the second uses probabilistic concepts to determine a measure of the risk involved  
The authors have designed the text to assist individuals to prepare to successfully complete the economics portions of the
