Gap Analysis & Transition Guide

OHSAS 18001:2007 to ISO 45001:2018

Introduction

Although the introduction of ISO 45001:2018 brings a new standard into effect, most of its basic principles are already formulated in OHSAS 18001:2007. The new standard encompasses core occupational safety requirements for management, employees and service providers, including the specific requirements relating to the respective work environment and changes to these requirements.

The focal points of the **new requirements** to interpret and implement are:

1. 4.1 Context of the organization;
2. 4.2 Interested parties;
3. 6.1.2.1 Hazard identification;
4. 6.1.2.2 Assessment of OH&S risks and other risks to the OH&S management system;
5. 6.1.2.3 Assessment of OH&S opportunities and other opportunities for the OH&S management system;
6. 8.1.2 Eliminating hazards and reducing OH&S risks;
7. 8.1.3 Management of change;
8. 8.1.4.1 Procurement – General;
9. 8.1.4.2 Contracting;
10. 8.1.4.3 Outsourcing.

The degree of change necessary will be dependent upon the maturity and effectiveness of your current management system, organizational structure and operational practices. Therefore, a gap analysis of the new requirements is strongly recommended in order to identify realistic resource and time implications.

Organizations using OHSAS 18001:2007 are recommended to take the following actions:

1. Obtain a copy of ISO 45001:2018 - https://www.iso.org/standard/65218?_from=iso;
2. Train internal auditors and other key personnel on new standard;
3. Using this document, undertake a gap analysis of the new requirements against the current management system;
4. Develop an implementation plan to fill the gaps that you identified;
5. Align your documentation and processes with ISO 45001 requirements;
6. Update your OH&S policy, objectives, targets and EPs;

The ISO 45001:2018 Implementation Handbook Milton P. Dentch, 2018-06-05 As with Milt Dentch's previous ASQ books on ISO management systems ISO 9001 and ISO 14001 his coverage of ISO 45001 2018 manages to be both concise yet fully informative Avoiding fluff the book's guidance on this new ISO health and safety standard provides a helpful section by section digest coupled with implementation examples and changes from the OHSAS 18001 requirements Dennis Sasseville Sustainability Quality Systems Director Worthen Industries Inc This handbook explains how an organization can use a management system to both control and improve its safety or occupational health and safety performance It provides guidance in building the OH S management system in

support of the organization's operations linking the management system to the requirements of ISO 45001:2018 to support third party certification. Included in the text are best practices as well as common pitfalls or weaknesses I have observed in various organizations. For those organizations certified according to OHSAS 18001:2007 the book highlights the changes required to upgrade to the new international standard. The ISO 45001:2018 Implementation Handbook is formatted to describe each clause of ISO 45001:2018 in four sections: Correspondence with the current OHSAS 18001 standard; The ISO requirement; Guidance on conformance to the requirements; Questions for internal auditors. A CD included with this handbook contains internal auditor check sheets that can be used to assess conformance to ISO 45001:2018. Electronic Books Only CD ROM files are available for download.

Development of an Expert System to Identify Implementation Gaps of OHSAS 18001 in Manufacturing Industries Akash Suri, 2007. An expert system (ES) has been developed to perform OHSAS 18001 Gap Analysis for the small and medium scale manufacturing industries in Malaysia. OHSAS 18001 is the standard for occupational safety and health management system. The expert system was written using JavaScript version 1.4 and is named Gap Analysis Expert System (GAES). Although OHSAS 18001 is a proven safety management system, the major problem among small and medium scale manufacturing companies is its implementation, mainly due to cost factors. This fact has been derived after the researcher received direct feedback from manufacturing companies during audits. The approach in the development of the system starts with surveys. Two categories of survey are done: that is, the domain expert interviews and the field surveys. Two domain experts are interviewed and the questionnaires for the field survey are filled up. The field survey covers 30 OSH consultants who comment on 30 different factors that would exert an influence on the implementation of OHSAS 18001. The raw data obtained in the field surveys is processed and a ranking of factors is subsequently derived. The field surveys reveal that the three most important factors that exert an influence in the implementation of OHSAS 18001 are Safety Culture, Process Hazard Analysis, and Job Training. Indeed, the top ten factors from the survey are given close attention and they are matched against the sixteen statements found in the GAES. The sixteen statements contained in the GAES originate directly from the clauses of OHSAS 18001 standard. This exercise would indicate the statements in the GAES that would need to be considered very carefully when administering the expert system, thus enhancing accuracy and reliability. The GAES has been found to be a user-friendly expert system that churns out the final safety gap of an organization expressed in percentage value. This finding is expected to initiate and spearhead efforts in the implementation of OHSAS 18001 among small and medium scale manufacturing companies. Finally, the GAES was field tested in two organizations: IBI Brass M Sdn Bhd and Topaz Evergreen M Sdn Bhd.
