Solutions Manual for instructors containing the complete worked out solutions to chapter end problems. In depth presentation of potential equations for compressible flows, similarity rule and two dimensional compressible flows. Logical and systematic treatment of fundamental aspects of gas dynamics, waves in the supersonic regime and gas dynamic processes. TARGET AUDIENCE: BE, B Tech, Mechanical Engineering, Aeronautical Engineering, ME, M Tech, Thermal Engineering, Aeronautical Engineering. Applied Gas Dynamics Ethirajan Rathakrishnan, 2019-02-21. A revised edition to applied gas dynamics with exclusive coverage on jets and additional sets of problems and examples. The revised and updated second edition of Applied Gas Dynamics offers an authoritative guide to the science of gas dynamics. Written by a noted expert on the topic, the text contains a comprehensive review of the topic from a definition of the subject to the three essential processes of this science: the isentropic process, shock and expansion process, and Fanno and Rayleigh flows. In this revised edition, there are additional worked examples that highlight many concepts, including moving shocks, and a section on critical Mach number is included that helps to illuminate the concept. The second edition also contains new exercise problems with the answers added. In addition, the information on ram jets is expanded with helpful worked examples. It explores the entire spectrum of the ram jet theory and includes a set of exercise problems to aid in the understanding of the theory presented. This important text includes a wealth of new solved examples that describe the features involved in the design of gas dynamic devices. Contains a chapter on jets; this is the first textbook material available on high speed jets. Offers comprehensive and simultaneous coverage of both the theory and application. Includes additional
