One-dot Theory Described, Explained, Inferred, Justified, and Applied Peter Kien-hong Yu, 2011-12-23 The ancient Chinese scholars are fond of applying the Yin and Yang diagram to correlate almost everything This book continues that tradition and uses the model to study other non dialectical theories and models The major finding qua contribution in this publication is to point out that the four diagrams are equivalent to the BaGua or BaGuaTu BG a set of eight ancient China symbolic notations gossip Another finding is that dialectical crab and frog motion remark is just the opposite of a non dialectical crab and frog motion usually deductive linear or cause and effect remark or at best they must meet half way The two major tasks of this book are to first apply the author s one dot theory which is shored up by the crab and frog motion model to convert other theories and models as well as studies and second apply his theory and model to reinvent some well known western derived theories and models and studies such as game theory The attempt is to narrow

Developing a Successful Subsidiary Strategy Paul Lyons, 2023-09-18. Most books on business strategy approach the subject from a corporate perspective covering topics such as the vision for the business, the marketplace, competition and differentiation. However, the reality is that most managers work in sub units or subsidiaries of the business and they are not involved in corporate strategy formulation. Their strategic concerns are with the positioning and future trajectory of their own units within the complex internal ecosystem in which they exist. If these units are to survive and grow, the middle managers responsible for them must plan their future, maximise their value add and compete for resources within the internal market of their corporations. Such internal markets are becoming increasingly volatile due to general economic conditions but also given the questioning of globalisation and increasing corporate concerns about the frailties of international supply chains as brought into sharp focus by the COVID 19 crisis and the war in Ukraine. This book provides practical perspectives for these business unit managers and a step by step toolkit that can be used by management teams to develop a successful subsidiary strategy that acknowledges these challenges while maximising their contribution to corporate objectives. It is based on the author's 30 years of experience as an executive in a complex multinational IBM organisation supplemented by academic study at Master's and PhD levels. The material covered has been verified through workshops over a 3 year period with the senior leadership teams of over 30 multinational subsidiaries operating from Ireland.

International Governance and Regimes Peter Kien Hong Yu, 2012-08-21. This book examines China's involvement in international governance, international regimes and globalization. Peter Kien hong Yu offers a new framework with which to understand international regimes and applies it to important Chinese case studies such as arms control, disarmament and non proliferation, the counter piracy regime and the environmental issue. Whilst internationally important matters related to such systems are identified, Yu's discussions attempt to find out whether any particular system works better in relation to China and asks if not why not. After examining eight different cases, the author concludes that these regimes are working but there is ample room for improvement and that the Chinese Communists for one have to enhance their understanding of

international governance and try to export their experience to other parts of the world International Governance and Regimes will be appeal to anyone interested in International Politics Chinese Studies Political theory and International Relations

Innovation Systems in Small Catching-Up Economies Elias G. Carayannis, Urmas Varblane, Tonu Roolaht, 2011-12-13 In several parts of the world countries are undergoing economic social and political transitions enhanced and accelerated by the forces of globalization These transition economies can serve as laboratories for understanding the innovation process This volume features original theoretical and empirical research It offers the first comprehensive view of innovation system development in the context of small catching up economies Smallness path dependency and latecomer status of such economies create some inherent limitations for their innovation

systems but these special characteristics can offer advantages as well. For example, smallness is often related with increased flexibility and shorter reaction times while latecomers can benefit from earlier experiences of their more advanced neighbors. Path dependency highlights the fact that the innovation system development processes are considerably influenced by the past experience of a particular country or region. By incorporating these features into an integrated analysis, the authors address such questions as: What special features characterize the innovation system development in small catching up economies? What are the causes for innovation success or failure? How do organizational capabilities and internationalization tendencies relate to company level innovations? What is the role of human capital and social factors in the innovation process? How can various policies support innovation in an integrated manner? Drawing from research about Europe, Asia, and Latin America, the authors provide readers with a systemic view of the innovation system development in small catching up economies. They discuss the unique features of this development and contribute to an in-depth understanding of various determinants and their impacts on the innovation process. The policy implications will offer a set of normative guidelines for enhancing innovation system development.
