A World Atlas of Translation

Yves Gambier, Ubaldo Stecconi, 2019-02-15. What do people think of translation in the different historical, cultural, and linguistic traditions of the world? How many uses has translation been put to? How distant from one another are the concepts of translation found in the different traditions? These are some of the questions A World Atlas of Translation addresses. Its twenty-one reports give us pictures taken from the inside, both from traditions that are well represented in the literature and from the many that for now are not. But the Atlas is not content with documenting; no map is this innocent. In fact, the wealth of information collected and made accessible by its reporters can be useful to gauge the dispersion of translation concepts across traditions. As you read its reports, the Atlas will keep asking: How far apart do these concepts look to you? Finally, and more ambitiously, the reports can help us test the hypothesis that a cross-cultural notion of translation exists. In this respect, the Atlas is mostly a proof of concept. It hopes to encourage further fact-based research in quest of a robust and compelling unifying notion of translation.

The Languages and Linguistics of Indigenous North America

Carmen Dagostino, Marianne Mithun, Keren Rice, 2023-09-05. This handbook provides broad coverage of the languages indigenous to North America, with special focus on typologically interesting features and areal characteristics. Surveys of current work and topics of particular importance to communities. The volume is divided into two major parts: subfields of linguistics and family sketches. The subfields include those that are customarily addressed in discussions of North American languages: sounds and sound structure, words, sentences, as well as many that have received somewhat less attention until recently: tone, prosody, sociolinguistic variation, directives, information structure, discourse, meaning, language over space and time, conversation structure, evidentiality, pragmatics, verbal art, first and second language acquisition, archives, evolving notions of fieldwork. Family sketches cover major language families and isolates and highlight topics of special value to communities engaged in work on language maintenance, documentation, and revitalization.

Slavic on the Language Map of Europe

Andrii Danylenko, Motoki Nomachi, 2019-10-08. Conceptually, the volume focuses on the relationship of the three key notions that essentially triggered the inception and subsequent realization of this project: language contact, grammaticalization, and areal grouping. Fully concentrated on the areal, typological, and historical dimensions of Slavic, the volume offers new insights into a number of theoretical issues, including language contact, grammaticalization mechanisms, borrowing, the relationship between areal, genetic, and typological sampling, conservative features versus innovation, and sociolinguistic aspects of linguistic alliances conceived of both synchronically and diachronically. The volume integrates new approaches towards the areal, typological profiling of Slavic as a member of several linguistic areas within Europe, including SAE, the Balkan

Sprachbund and Central European groupings like the Danubian or Carpathian areas as well as the Carpathian Balkan linguistic macroarea. Some of the chapters focus on structural affinities between Slavic and other European languages that arose as a result of either grammatical replication or borrowing. A special emphasis is placed on contact induced grammaticalization in Slavic micro languages.

Vanished Sadiah Qureshi, 2025-06-05. A vital and important book. David Olusoga. From an award winning historian of race science and empire, a path breaking and poignant history of extinction as a scientific idea, an imperial legacy, and a political choice. Anyone alive today is among a tiny fraction of the once living. Over 90% of species that ever existed are now extinct. How did we come to think of ourselves as survivors in a world where species can vanish forever, or as capable of pushing our planet to the verge of a sixth mass extinction? Extinction, Sadiah Qureshi shows us, is a surprisingly modern concept and a phenomenon that is not as natural as we might think. In Europe, until the late eighteenth century, species were considered perfect and unchanging creations of God. Then, in the age of revolutions, scientists gathered enough fossil evidence to determine that mammoth bones, for example, were not just large elephants but a lost species that once roamed the Earth alongside ancient humans. Extinction went from being regarded as theologically dangerous to pervasive and even inevitable.

Yet Vanished shows us that extinction is more than a scientific idea it s a political choice that has led to devastating consequences Europeans and Americans quickly used the notion that extinction was a natural process to justify persecution and genocide predicting that nations from Newfoundland s Beothuk to Aboriginal Australians were doomed to die out from imperial expansion Exploring the tangled and unnatural histories of extinction and empire Vanished weaves together pioneering original research and breath taking storytelling to show us extinction is both an evolutionary process and a human act one which illuminates our past and may alter our future

Language Typology and Historical Contingency

Balthasar Bickel, Lenore A. Grenoble, David A. Peterson, Alan Timberlake, 2013-12-15 What is the range of diversity in linguistic types what are the geographical distributions for the attested types and what explanations based on shared history or universals can account for these distributions This collection of articles by prominent scholars in typology seeks to address these issues from a wide range of theoretical perspectives utilizing cutting edge typological methodology The phenomena considered range from the phonological to the morphosyntactic the areal coverage ranges in scale from micro areal to worldwide and the types of historical contingency range from contact based to genealogical in nature Together the papers argue strongly for a view in which although they use distinct methodologies linguistic typology and historical linguistics are one and the same enterprise directed at discovering how languages came to be the way they are and how linguistic types came to be distributed geographically as they are

The Use of Databases in Cross-Linguistic Studies Martin Everaert, Simon Musgrave, Alexis Dimitriadis, 2009-03-26 This book promotes the development of linguistic databases by describing a number of successful database projects focusing especially on cross linguistic and typological research It has become increasingly clear that ready access to knowledge about cross linguistic variation is of great value to many types of linguistic research Such a systematic body of data is essential in order to gain a proper understanding of what is truly universal in language and what is determined by specific cultural settings Moreover it is increasingly needed as a tool to systematically evaluate contrasting theoretical claims The book includes a chapter on general problems of using databases to handle language data and chapters on a number of individual projects Note This title was originally announced as including a CD Rom with databases The CD Rom however was replaced by a list of URLs within the book More information as well as links to the databases can also be found here
