

Interactions of X-rays with matter

- **No interaction**; X-ray passes completely through tissue and into the image recording device.
- **Complete absorption**; X-ray energy is completely absorbed by the tissue. No imaging information results.
- **Partial absorption with scatter**; Scattering involves a partial transfer of energy to tissue, with the resulting scattered X-ray having less energy and a different trajectory. Scattered radiation tends to degrade image quality and is the primary source of radiation exposure to operator and staff.
