[A Hands-on Introduction to Big Data Analytics](#) , *Radically Human* Paul Daugherty, H. James

Wilson, 2022-04-26

Technology advances are making tech more human. This changes everything you thought you knew about innovation and strategy. In their groundbreaking book *Human Machine*, Accenture technology leaders Paul R. Daugherty and H. James Wilson showed how leading organizations use the power of human-machine collaboration to transform their processes and their bottom lines. Now, as new AI-powered technologies like the metaverse, natural language processing, and digital twins begin to rapidly impact both life and work, those companies and other pioneers across industries are tipping the balance even more strikingly toward the human side with technology-led strategy that is reshaping the very nature of innovation. In *Radically Human*, Daugherty and Wilson show this profound shift fast-forwarded by the pandemic toward more human and more humane technology. Artificial intelligence is becoming less artificial and more intelligent. Instead of data-hungry approaches to AI, innovators are pursuing data-efficient approaches that enable machines to learn as humans do.

Instead of replacing workers with machines they're unleashing human expertise to create human centered AI. In place of lumbering legacy IT systems they're building cloud first IT architectures able to continuously adapt to a world of billions of connected devices. And they're pursuing strategies that will take their place alongside classic winning business formulas like disruptive innovation. These against the grain approaches to the basic building blocks of business Intelligence Data Expertise Architecture and Strategy IDEAS are transforming competition. Industrial giants and startups alike are drawing on this radically human IDEAS framework to create new business models optimize post pandemic approaches to work and talent rebuild trust with their stakeholders and show the way toward a sustainable future. With compelling insights and fresh examples from a variety of industries Radically Human will forever change the way you think about practice and win with innovation.

**Storage Systems** Alexander Thomasian, 2021-10-13 Storage Systems Organization Performance Coding Reliability and Their Data Processing was motivated by the 1988 Redundant Array of Inexpensive Independent Disks proposal to replace large form factor mainframe disks with an array of commodity disks. Disk loads are balanced by striping data into strips with one strip per disk and storage reliability is enhanced via replication or erasure coding which at best dedicates  $k$  strips per stripe to tolerate  $k$  disk failures. Flash memories have resulted in a paradigm shift with Solid State Drives SSDs replacing Hard Disk Drives HDDs for high performance applications. RAID and Flash have resulted in the emergence of new storage companies namely EMC NetApp SanDisk and Purestorage and a multibillion dollar storage market. Key new conferences and publications are reviewed in this book. The goal of the book is to expose students researchers and IT professionals to the more important developments in storage systems while covering the evolution of storage technologies traditional and novel databases and novel sources of data. We describe several prototypes FAWN at CMU RAMCloud at Stanford and Lightstore at MIT Oracle's Exadata AWS Aurora Alibaba's PolarDB Fungible Data Center and author's paper designs for cloud storage namely heterogeneous disk arrays and hierarchical RAID. Surveys storage technologies and lists sources of data measurements text audio images and video. Familiarizes with paradigms to improve performance caching prefetching log structured file systems and merge trees LSMs. Describes RAID organizations and analyzes their performance and reliability. Conserves storage via data compression deduplication compaction and secures data via encryption. Specifies implications of storage technologies on performance and power consumption. Exemplifies database parallelism for big data analytics deep learning via multicore CPUs GPUs FPGAs and ASICs e.g. Google's Tensor Processing Units.
