[Law, Ethics and Emerging Military Technologies](#) George Lucas, 2022-12-16 This book addresses issues of legal and moral governance arising in the development deployment and eventual uses of emerging technologies in military operations Proverbial wisdom has it that law and morality always lag behind technological innovation Hence the book aims to identify enumerate and constructively address the problems of

adequate governance for the development deployment and eventual uses of military technologies that have been newly introduced into military operations or which will be available in the near future. Proposals for modifications in governance the book argues closely track the anxieties of many critics of these technologies to the extent that they will proliferate prove destructive in unanticipated ways and partially or wholly escape regulation under current treaties and regulatory regimes. In addition to such concerns in domestic and especially in international law the book addresses ethical norms in the professions involved in the design and eventual use of specific technologies principally involving the professional norms of practice in engineering and the military as well as biomedical and health care practice which impose moral obligations on their members to avoid reckless endangerment or criminal negligence in the course of their activities. Thus in addition to exploring the application of existing legal regimes and moral norms the book examines how these professions might develop or improve the voluntary constraints on forms of malfeasance that are enshrined in their histories and codes of best practices. This book should prove of great interest to students of ethics military studies philosophy of war and peace law and international relations.

**Army of None: Autonomous Weapons and the Future of War** Paul Scharre, 2018-04-24 Winner of the 2019 William E Colby Award. The book I had been waiting for I can't recommend it highly enough. Bill Gates. The era of autonomous weapons has arrived. Today around the globe at least thirty nations have weapons that can search for and destroy enemy targets all on their own. Paul Scharre a leading expert in next generation warfare describes these and other high tech weapons systems from Israel's Harpy drone to the American submarine hunting robot ship Sea Hunter and examines the legal and ethical issues surrounding their use. A smart primer to what's to come in warfare. Bruce Schneier. *Army of None* engages military history global policy and cutting edge science to explore the implications of giving weapons the freedom to make life and death decisions. A former soldier himself Scharre argues that we must embrace technology where it can make war more precise and humane but when the choice is life or death there is no replacement for the human heart.
