Fundamentals of Sustainable Development Niko Roorda, 2025-01-28 This completely revised fourth edition of

Fundamentals of Sustainable Development provides an accessible and interdisciplinary introduction to sustainable development for undergraduate and postgraduate students across the natural and social sciences and beyond. It is designed to easily align with structured modules to enable students to work through topics one by one. Building on the previous edition's user friendly and comprehensive overview, this edition offers a macro and micro perspective on the challenges of sustainable holistic development, looking at the impacts on global society in addition to people, planet, and profit. It discusses in detail the benefits and limitations of the UN Sustainable Development Goals, linking these to new case studies throughout to provide a broad international lens and highlighting regionally specific environmental issues, ecological approaches, indigenous perspectives, and successful development strategies. The increasing risks of zoonoses and pandemics and their impact on sustainable development are discussed as human activities within nature rise as a result of climate change. Timely topics on sustainable business are introduced across the book, including carbon footprints, ecolabels, greenwashing, measuring and reporting degrowth, and personal and professional action points. The book also taps into timely philosophical discussions relating to the Anthropocene, such as climate anxiety, emotional connection to nature, and more than human debates. For instructors and students, new and revised supplemental resources can be accessed via the book's website, including PowerPoints, lab-based exercises, such as spreadsheet modelling, debate assignments, and research tasks. This is the must-have resource for students and lecturers in all disciplines who have an interest in the sustainability of our planet, our human society, and global economy.

World Energy Handbook Slobodan Petrovic, 2023-09-30 *World Energy Handbook* presents an overview of the energy systems of selected countries in Africa, Asia, the Americas, and Europe. It is a complete guide to energy history and generation in these countries, including renewable energy storage and use. The authors

follow the same analytical approach for each country to construct comprehensive surveys of all aspects of energy systems examining the advantages and disadvantages of each country's energy infrastructures. The handbook aims to raise awareness about the condition and deficiencies of energy systems in developing countries and the potential for the countries to improve, grow and advance the technologies for energy generation especially by turning to renewable energy sources to increase energy storage capacities and optimizing the way subsystems are integrated. The book serves as a must-have guide for decision makers, investors, business people and other professionals to understand the global distribution of energy generation, transmission and each country's carbon footprint and identify opportunities for energy system improvement worldwide.

Photovoltaic Pumping Systems for Domestic Sustainable Water Access in Off-Grid Areas Judith Alazraque Cherni, Simon Meunier, Loïc Quéval, 2024-03-23. This book offers practical guidance for practitioner engineers, policymakers and other decision makers on how to implement solar photovoltaic water pumping systems to provide domestic clean water in off-grid regions of developing countries. By championing genuine multidisciplinary research and generating interdisciplinary results, this book develops models and approaches which indicate how it might be possible to overcome some of the limitations that technocratic approaches to renewable energy and water access pose to truly sustainable development. The book addresses technical challenges often found when promoting photovoltaic water pumping systems. It offers practical guidance to stakeholders on how to successfully select, install and maintain photovoltaic water pumps to promote sustainable options for the poorest underserved areas/populations. A main novelty of this book is that by using theoretical as well as real actual field work data and advanced modelling, it successfully connects energy systems engineering, environmental and geographical information and hydrology with population surveys which reveal local needs and conditions. The book is timely and important. More than 665 700 million worldwide still do not have access to improved drinking water sources; eight out of ten live in rural areas typically located either in off-grid territory or where connection to nearby grid is too expensive or unfeasible. Unsafe water is responsible for 1.2 million deaths each year, mainly correlated with the diarrheal diseases generated from drinking water from unimproved water sources. Sustainable Development Goal 6 (clean water and sanitation) may be achieved only if water is accessible to everyone available when needed and free from contamination.

Applied Hydraulic Transients Mihail Popescu, Dumitru Arsenie, Paul Vlase, 2003-01-01. The topics covered include the waterhammer in hydraulic systems under pressure, experimental results concerning the waterhammer protection of pumping stations with reference to the waterhammer hydraulic resonance in hydroelectric power plant and pumping stations, mass oscillation in hydraulic surge systems, hydraulic stability of systems endowed with surge

tanks experimental results in the study of mass oscillations hydroelectric power plants and pumping stations designed in complex hydraulic schemes and computation of unsteady motions in the intermediate domain between rapid and slow motions This book is not a standard monograph based on previously published material but is primarily grounded on the theoretical and applied results obtained by authors during more than 20 years of practice It considers the problems of hydraulic computation as encountered in the design of a significant number of hydroelectric power plants and pumping stations in Romania
